

Dioxin level study

- Commenced ethical approval process
- Some issues remaining to sort out:
 - Community random or volunteer – important to “match” with controls (probably blood bank).
 - (Dietary questionnaire?)
 - No predefined “alert level”
 - Little health impact interpretation possible.

Review of literature on vegetable contamination

- Deposition from atmosphere
- Low levels
- No advantage over dust deposition monitoring

Newsletter

- Intend to distribute once information re dioxin study is finalised.

Other questions?

- Next meeting
