

ComPacks Program Eligibility Checklist

Information for Local Health Network & Hospital staff

ComPacks is a **non clinical** coordinated package of **community care** – does your patient need one in order to be **safely transferred home**?

Has the patient been assessed as requiring the following to enable transfer home from hospital ?

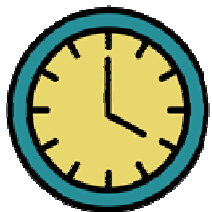

- Case Management, and
- A combination of low level community support services (an allied health assessment may be required to determine this).

Note: ComPacks does not include clinical support e.g. community nursing.

Has it been determined that the patient does not have existing community services in place that can support them at home?

- For example a Community Aged Care Package, existing HACC services, DVA services

No other informal support options are available for the patient.

Are family, carers, friends and neighbours willing and able to provide support?

Discuss Referral to ComPacks with patient
