

RESPIRATORY ILLNESS

Help us protect our patients, visitors and staff

- If you have any flu or COVID-19 symptoms (including fever, cough, sore/scratchy throat, shortness of breath, loss of smell or taste), delay your visit until your symptoms resolve.
- Return home and get tested for COVID-19 immediately.
- If your visit is urgent, wear a face mask and notify a staff member when you arrive.
- Thank you for your cooperation in helping to protect our patients, who are at particular risk from respiratory illness.
