

Appendix 5: Public Health Management of cases of enteric fever flow diagram

[#]Travel-related:

Developed symptoms within 28 days after return to Australia from an endemic country (cases outside 28 day window require further assessment of source but may still be travel related).

^{*}Higher risk of transmitting disease:

- food handlers,
- carers of patients,
- carers of children,
- carers of the elderly,
- children in pre-school, kindergarten or child care (ie below primary school age)
- those unable to maintain personal hygiene and their carers.
