

Hygiene advice for people living in residential buildings

COVID-19 can survive on surfaces for a few hours or up to several days. It can be killed through simple cleaning and disinfection. While cleaning is important, the risk of transmission from a contaminated surface is much lower compared to having close contact with a COVID-19 case.

Residents and common areas

People living in residential buildings should take care when moving through common areas to reduce the risk of COVID-19:

- Clean your hands with soap and water for 20 seconds or use an alcohol-based hand rub/sanitiser after touching any frequently touched surfaces in common areas. This includes doorknobs or door handles when you enter and exit the building or when using communal washing machines or dryers
- Cover your nose and mouth with a tissue when coughing and sneezing or use your elbow, not your hands
- Avoid close contact with people unwell with cold or flu-like symptoms
- Avoid touching your face and avoid shaking hands with others
- Try to maintain a distance of 1.5 metres from others as much as possible in your apartment block, such as in elevators, stairwells or hallways
- Do not gather in large groups in common areas such as rooftops or courtyards.
- Wear a face mask in indoor common areas

Cleaning guidance for NSW strata managers and body corporates

- Regularly clean frequently touched surfaces in common areas with a detergent followed by disinfectant, or use detergent/disinfectant wipes
- Consider providing adequate alcohol-based hand rub (sanitiser) for residents to use.
