

Boost your protection against COVID-19

COVID-19 booster vaccinations are now available and recommended.

You are eligible to receive a booster vaccine if you are:

Aged **18 years and over**

It has been **3 months** since you received your second dose of a COVID-19 vaccine.

The Pfizer and Moderna mRNA vaccines are approved for Booster vaccinations, even if you had a different vaccine for your first two doses.

Boosters help keep protection high

Vaccine efficacy against symptomatic infection can drop from around **94%** to around **50%** after several months since the second dose of vaccination.

People who receive a third booster dose after their second dose **reduce** their risk of:

Hospital admission by **93%**

Serious illness by **92%**

Death by **81%**

compared to people who only received two doses.

It's not mandatory to get a booster, but it is highly recommended.

Not only does it help keep your protection against COVID-19 high, it also protects your family, colleagues, and the wider community.

Book today! For more information on booster vaccinations, visit:
