

## Guide for Pharmacies exiting the Opioid Treatment Program: Facilitating change of dosing points

This guide supports the safe and efficient change of dosing points for people on the opioid treatment program. **Pharmacists exiting the Opioid Treatment Program have a duty of care to ensure the change of dosing point process is efficient, thorough and person-centred.** Pharmacists play a crucial role discussing the change of dosing point process with clients and communicating last dose details and other relevant information to the new dosing point. This ensures continuity of access to treatment for the client and minimises disruption.

### Discuss the process with the client

Pharmacists have a duty of care to discuss the change of dosing point process with the client, including:

- ▶ The date by which they need to change dosing points.
- ▶ Information about other local dosing points options, referring to [Opioid Treatment Line](#): 1800 642 428 if needed.
- ▶ Pharmacists will liaise with the prescriber to advise of the decision to cease providing OTP services and that alternative dosing points have been discussed with client.

Pharmacists should notify the [Pharmaceutical Regulatory Unit](#) that they will cease providing OTP.

### Clinical information to provide

Once the prescriber has been contacted and a transfer has been arranged, provide the following information in writing to the prescriber and to the new dosing point.

#### A summary of patient details including:

- medication(s) dispensed
- last dose details including any take-away doses provided
- new dosing point contact (if known)

Any **other relevant information** to support the transfer of dosing point.

**Provide contact details** in case follow up information is required.

### Liaise with Prescriber

Contact the prescriber to inform them of changes and provide details of:

- ▶ **planned date of last dose** to be dispensed by the current dosing point,
  - including **any takeaway doses**, if any, to be provided on the date of last dose
- ▶ Details of the new dosing point to be agreed with prescriber.

To support a safe transfer, pharmacists and prescribers should consider co-ordinating the timing of last dose inc. takeaway doses to last until an appointment with the prescriber can be arranged.

Prescribers should notify the NSW Ministry of Health of any permanent change to a NSW OTP client's dosing point using this [form](#).
