Public Health Medicine

The Workforce
Public Health Medicine is primarily concerned with the health and care of populations. It covers the promotion of health and the prevention of disease, illness and injury, the assessment of a community’s health needs, and the provision of services to communities in general. The Royal Australasian College of Physicians (RACP), Australian Faculty of Public Health Medicine is accredited by the Australian Medical Council (AMC) to deliver public health medicine training.

The Future in NSW - Workforce Planning to 2030

Workforce projections are provided for a low and high demand scenario. Where requirements for both scenarios are met without the need for additional fellows, the projected “No Growth” scenario workforce data is provided.

Workforce Modelling Considerations

- Workforce modelling is based on current models of care. Any change in the models may impact on requirements.
- Any changes to current training programs will affect the workforce modelling outcome.
- Workforce modelling is based on current workforce hours profile by age co-hours. Any changes to hours worked by future clinicians will affect the model.
- There is an accepted error rate of plus or minus two per cent within workforce modelling.
- The model does not address any mal-distribution either by location (rural or regional) or sector (public or private).
