Summary

The Admitted Patient Report gives an overview of admitted patient services provided in 2010-11 in NSW and complements information on population health and hospital performance and activity currently available in a range of Ministry of Health reports.

Admitted patient services are provided by 15 Local Health Districts (LHDs), the Sydney Children's Hospitals Network, the St Vincent's Hospital Network and Albury Base Hospital.

In 2010-11 there were over 2.4 million hospitalisations in NSW hospitals, of which 67% occurred in public hospitals and 33% in private hospitals. Of hospitalisations in public hospitals, 95% occurred in 84 public acute hospitals and 9 psychiatric hospitals.

Two types of statistics are presented in this report:

- Statistics for admitted patient services provided in public acute and psychiatric hospitals in NSW, each LHD and the two hospital networks, including individual public acute and psychiatric hospitals
- Statistics for the population resident in NSW and each LHD, regardless of where the person was hospitalised

In relation to hospitalisations in public acute and psychiatric hospitals in 2010-11, the main findings of the report are:

- There were 1,562,999 hospitalisations in NSW. The number of hospitalisations varied markedly across LHDs, ranging from 7,400 in Far West LHD to 190,327 in Hunter New England LHD.
- 46% of hospitalisations occurred in people aged 60 years and over. The percentage of hospitalisations that occurred in people aged 60 years and over varied from 38% in Nepean Blue Mountains LHD to 53% in Illawarra Shoalhaven LHD.
- 44% of hospitalisations were day-only and 56% were overnight. The highest percentage of day-only hospitalisations was in Far West LHD (55%) and the lowest was in Northern Sydney LHD (35%).

- The most common reason for hospitalisation was renal dialysis, comprising 291,339 hospitalisations. The number of hospitalisations for renal dialysis varied from 1,678 in Far West LHD to 39,316 in South Western Sydney LHD.
- Injury and poisoning accounted for 143,325 hospitalisations. The number of hospitalisations for injury and poisoning varied from 423 in Far West LHD to 16,795 in Hunter New England LHD.
- There were 104,555 hospitalisations for cardiovascular diseases (including heart disease, stroke and diseases of blood vessels) The number of hospitalisations for cardiovascular diseases varied from 483 in Far West LHD to 12,804 in Hunter New England LHD.
- The most common surgical procedures were caesarean section (19,079 hospitalisations), and major lens procedures (18,134 hospitalisations) The number of hospitalisations for caesarean section ranged from 80 in Far West LHD to 2,630 in Western Sydney LHD. The number of major lens procedures ranged from 47 in Western Sydney LHD to 2,943 in Hunter New England LHD.

In relation to NSW residents hospitalised in 2010-11, the main findings of the report are:

- There were over 2.6 million hospitalisations of NSW residents in NSW public and private hospitals or interstate public hospitals. Of these, 64% occurred in public hospitals and 36% occurred in private hospitals.
- 52% of day-only hospitalisations and 77% of overnight hospitalisations occurred in public hospitals.
- The most common reasons for hospitalisation were renal dialysis, accounting for 327,221 hospitalisations, and orthopaedic services, accounting for 178,590 hospitalisations. The number of hospitalisations for renal dialysis ranged from 3,209 for residents of Far West LHD to 42,491 for residents of South Western Sydney LHD. The number of hospitalisations for orthopaedic services ranged from 366 for residents of Far West LHD to 27,082 for residents of Hunter New England LHD.

In 2010-11 there were 47,021 hospitalisations in the Sydney Children's Hospitals Network, of which 17,996 occurred in the Sydney Children's Hospital and 29,025 occurred in The Children's Hospital at Westmead. Of these hospitalisations, 53% were overnight and 47% were day-only. The most common reasons for hospitalisation were injury or poisoning (11%) followed by respiratory conditions (11%). The most common surgical procedure was tonsillectomy or adenoidectomy (2% of all hospitalisations).

There were 40,576 hospitalisations in the St Vincent's Hospital Network, of which 95% occurred in St Vincent's Hospital. At St Vincent's Hospital, 55% of hospitalisations were day-only and 45% were overnight. The most common reasons for hospitalisation at St Vincent's Hospital were dialysis (24%) and diseases of the heart and blood vessels (9%).

While Albury/Wodonga Health Authority is not part of NSW Health, hospitalisations occurring in Albury Base Hospital are included in this report because Albury Base Hospital is geographically located in NSW and plays an important role in providing health services to the local NSW residents. There were 12,395 hospitalisations at Albury Base Hospital in 2010-11, of which 39% were day-only and 61% were over-night. The most common reasons for hospitalisation were injury and poisoning (16%), digestive diseases (13%), and diseases of the heart and blood vessels (8%).

Introduction

The purpose of the Admitted Patient Report is to report statistics on services to patients admitted to NSW hospitals and to residents of NSW. The report gives a summary of admitted patient services provided by hospitals in each Local Health District (LHD) and provided to residents of each LHD, as well as information on hospitalisations for individual public acute hospitals in Peer Group C2 District Group 2 and above. The Report complements population health, hospital performance and activity reporting currently available in the following publications:

- The health of the people of New South Wales - Report of the Chief Health Officer. Summary Report, 2010 (CER, 2010)
- NSW Mothers and Babies Report 2009 (CER, 2011a)
- Health Statistics New South Wales (CER, 2011b)
- Chartbook - Quality of Healthcare in NSW (CEC, 2011)
- Hospital Quarterly: Performance of NSW public hospitals (BHI, 2011)
- NSW Health Services Comparison Data Book 2008/09 (DPE, 2010)
- Australian hospital statistics 2009-10 (AIHW, 2011)

Admitted patient services in NSW public hospitals

The provision of admitted patient services to a community may be through the local hospital or a networked service. The range and level of services provided by a hospital are determined by the hospital's role delineation level, which reflects the support services, staff profile, safety standards and requirements that ensure clinical services are provided safely and with appropriate support. The role delineation level of a hospital describes the complexity of clinical activity undertaken by that hospital, and is significantly impacted by the presence of medical, nursing and other health care personnel who hold qualifications compatible with the defined level of service.

Where a service is provided across a network, there should be clear referral and clinical pathways for patients to the appropriate hospital for that community. Clinical networks

are established to support the efficient delivery of services and the spectrum of care which may be required for an individual's comprehensive treatment. These networks vary in type, and may be focused on collaborative processes that engage clinicians across clinical streams within a LHD; networks that provide for referral and support structures between service providers; and those that require a whole of state population for selected statewide and specialty services, such as transplantation.

When interpreting information provided for individual hospitals in this report, care must be taken in regard to the level of activity in specific service types. Hospitals differ in the range and complexity of the services that they provide; and for hospitals that have super-specialty services, the information presented in this report reflects a service catchment broader than the hospital's LHD.

Further information on Local Health Districts may be found on the web at: <http://www.health.nsw.gov.au/lhd/index.asp>

Scope and structure of the report

The report provides information at NSW, LHD and hospital levels (see Figure).

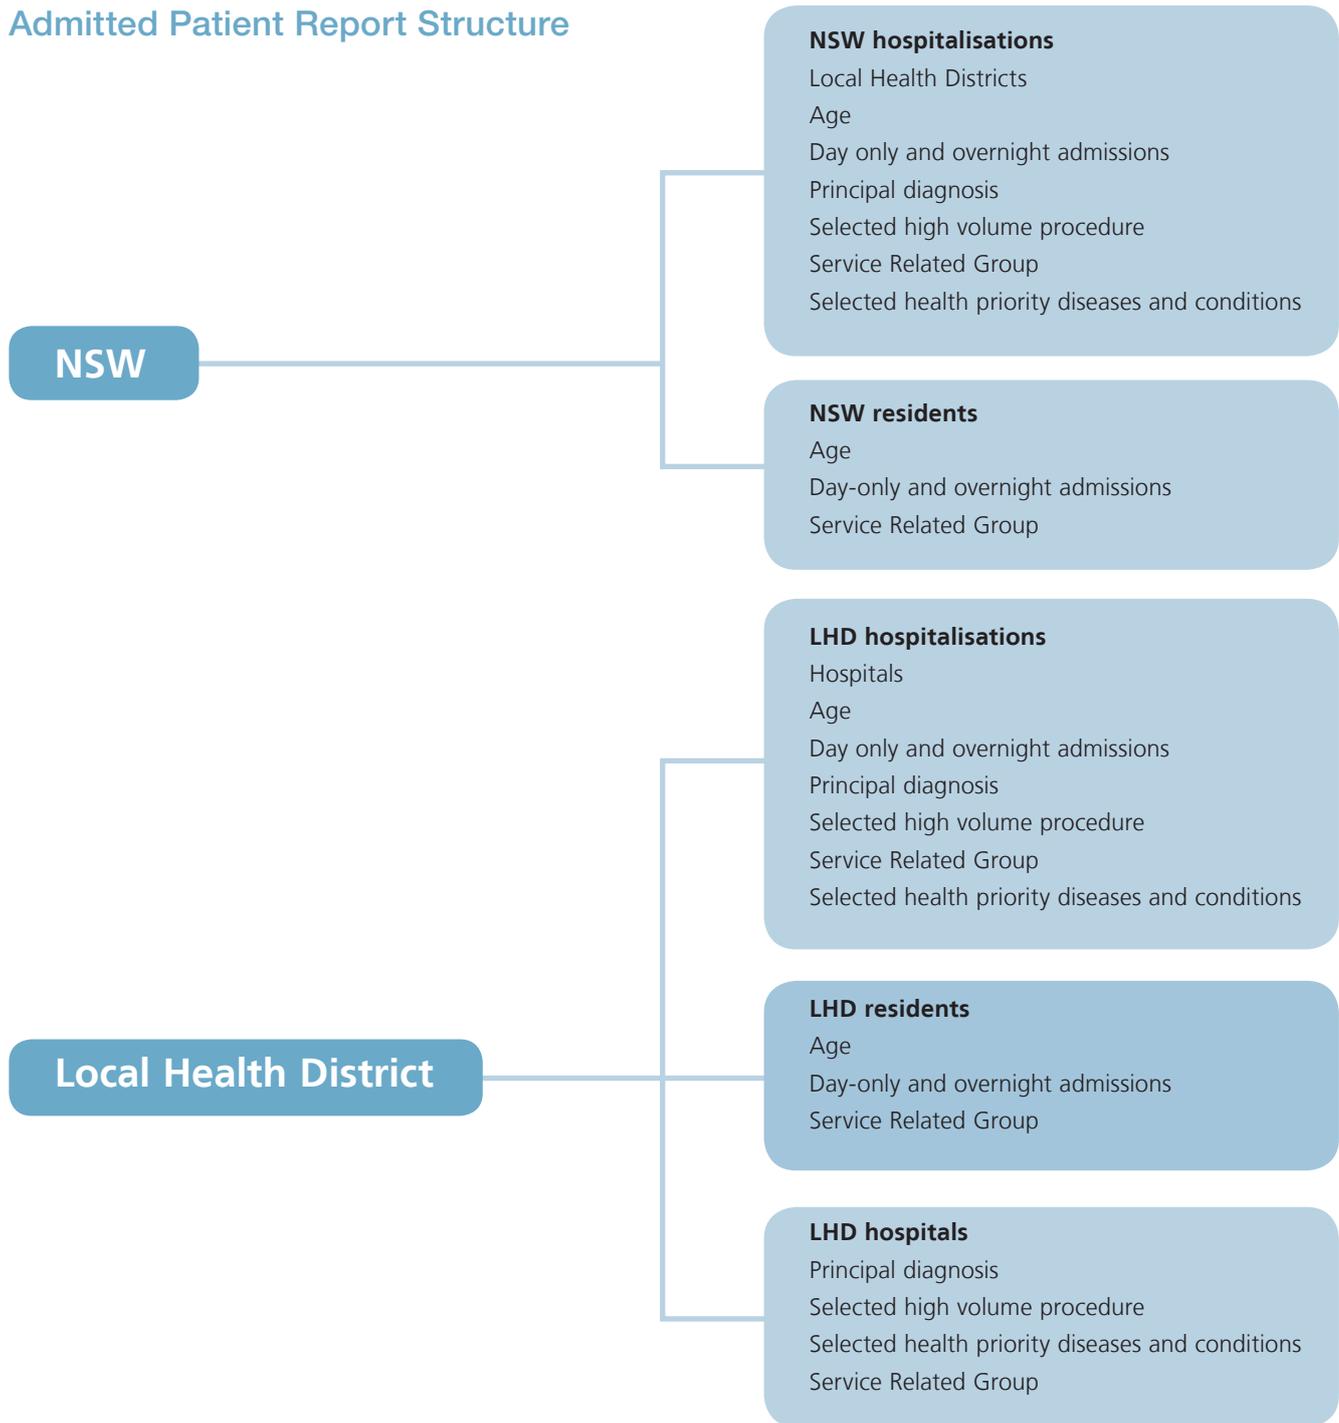

For NSW, information is provided for:

1. Hospitalisations in public acute hospitals (Peer Group C2 District Group 2 and above) and psychiatric hospitals (Peer Group F1)
2. Hospitalisations for NSW residents admitted to NSW public or private hospitals or interstate public hospitals.

For LHDs based on geographic boundaries, information is provided for:

1. Hospitalisations in public acute hospitals (Peer Group C2 District Group 2 and above)
2. Hospitalisations for NSW residents admitted to NSW public or private hospitals or interstate public hospitals.
3. Individual hospitals (Peer Group C2 District Group 2 and above)

Admitted Patient Report Structure

In relation to services provided to NSW or LHD residents, hospitalisations that occurred in interstate private hospitals are not included in the statistics.

For the Sydney Children’s Hospital Network and St Vincent’s Hospital Network, information on hospitalisations in public acute hospitals in Peer Group C2 District Group 2 is provided.

While Albury/Wodonga Health Authority is not part of NSW Health, hospitalisations occurring in Albury Base Hospital

are included in this report because Albury Base Hospital is geographically located in NSW and plays an important role in providing health services to the local NSW residents.

Hawkesbury District Health Service is a private hospital which has a contract to provide public patient services. In 2010-11 more than two-thirds of hospitalisations (69.3%) were for public contracted patients. Hospitalisations for these public contracted patients are included in this report.

New South Wales State Level Statistics

In the 2010-11 financial year, there were 2,433,633 hospitalisations in NSW. Of these, 1,642,535 (67%) occurred in public hospitals and 791,098 (33%) in private hospitals.

This chapter describes two sets of statistics:

- Overall hospital statistics

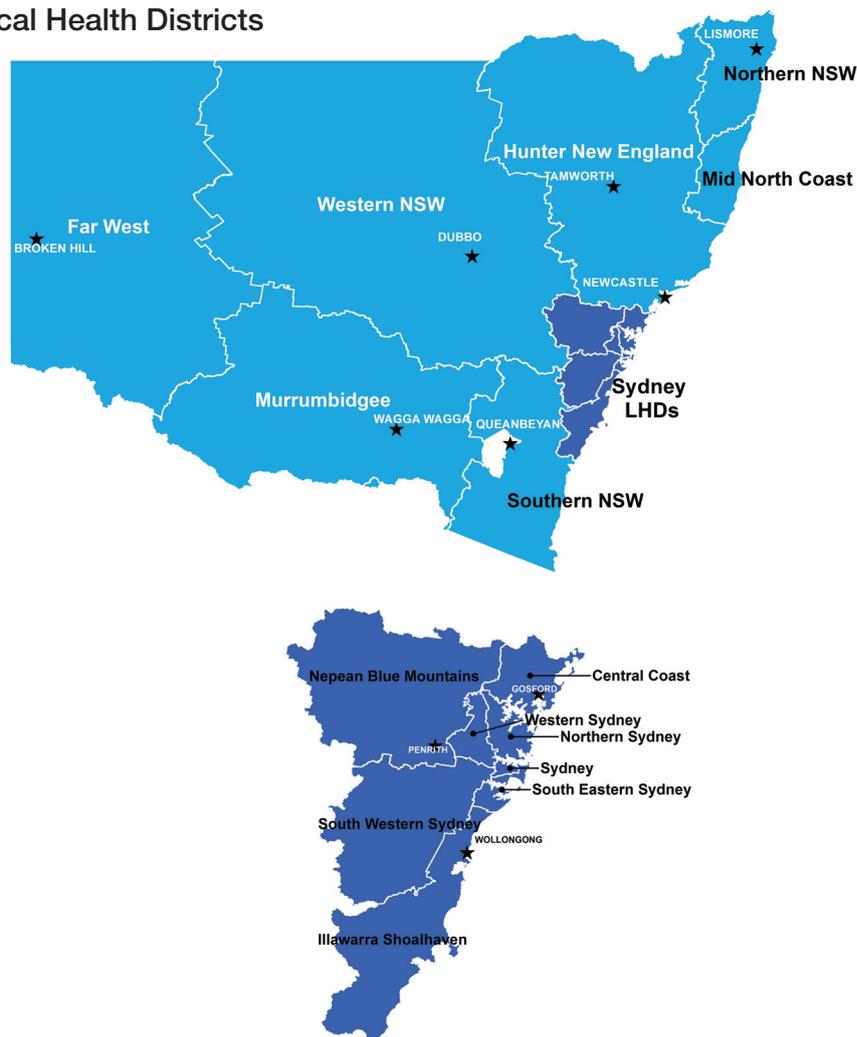

Section 2.1 describes combined statistics for 84 public acute hospitals (Peer Group C2 District Group 2 and above) and 9 psychiatric hospitals (Peer Group F1). In 2010-11, 1,562,999 (95%) of total public hospitalisations occurred in these hospitals.

- Population statistics

Section 2.2 describes hospitalisations for NSW residents that occurred in NSW public and private hospitals and interstate public hospitals.

The map below shows the 15 Local Health Districts in NSW. In addition the Sydney Children’s Hospitals Network, comprising the Sydney Children’s Hospital and The Children’s Hospital at Westmead, provides specialist children’s services, and the St Vincent’s Hospital network operates across public health services provided by three Sydney facilities operated by St Vincent’s Health.

Map of NSW Local Health Districts

Note: Local government area boundaries (2008) are shown within the LHD boundary.

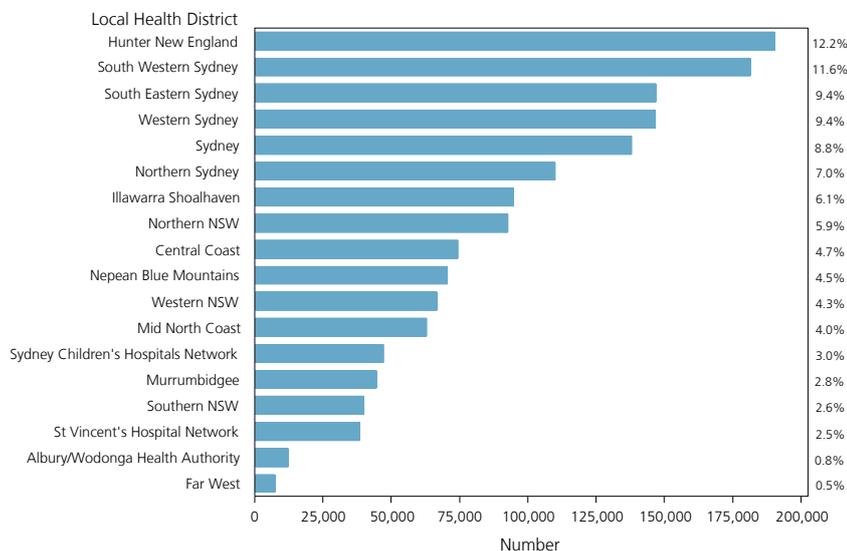

2.1 Hospitalisations: public acute and psychiatric hospitals

This section presents combined statistics for hospitalisations at 84 public acute hospitals (Peer Group C2 District Group 2 and above) and 9 psychiatric hospitals (Peer Group F1). A list of included hospitals is shown in the Appendix.

Statistics reported in this section include hospitalisations by:

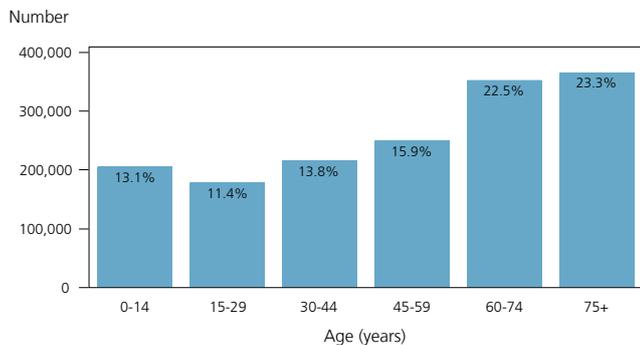

- Local Health District
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- Selected health priority diseases and conditions

Hospitalisations by Local Health District, selected public acute and psychiatric hospitals, NSW 2010-11

Notes: Includes 84 public acute hospitals (Peer Group C2 District Group 2 and above) and 9 psychiatric hospitals (Peer Group F1). Includes Albury Base Hospital. Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

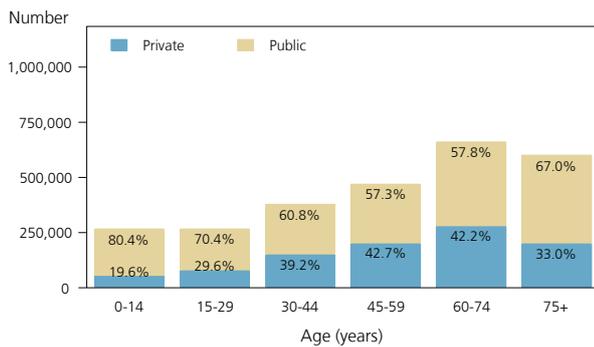

2.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of NSW residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

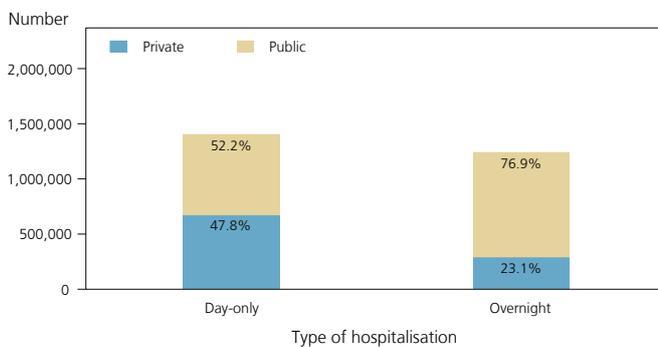

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Notes: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals. Service Related Group: SRG Version 4. The fall in reporting of endocrine diseases is related to changes in the coding standards for diabetes (see the Appendix).

CHAPTER 3

Sydney Local Health District

In the 2010-11 financial year, there were 142,757 hospitalisations in the Sydney LHD. Of these, 136,162 (95%) occurred in the following public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals: Canterbury Hospital, Concord Hospital, Royal Prince Alfred Hospital (includes RPA Institute of Rheumatology and Orthopaedics) and Thomas Walker Hospital; and 6,595 (5%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 3.1 describes combined statistics for three public acute hospitals (Peer Group C2 District Group 2 and above) and one psychiatric hospital (Peer Group F1).

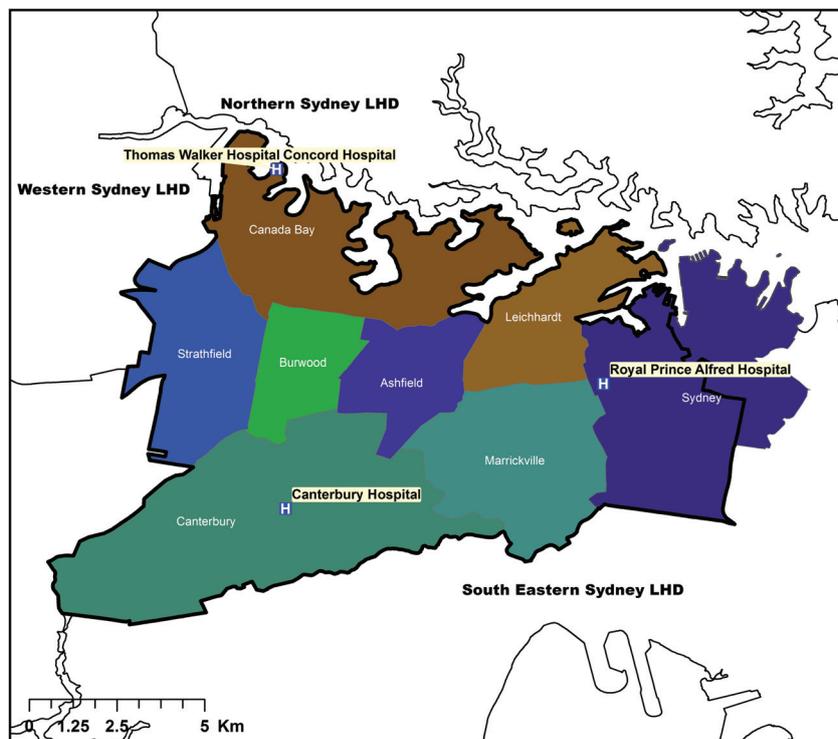

- Population statistics

Section 3.2 describes hospitalisations for Sydney LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Sydney Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

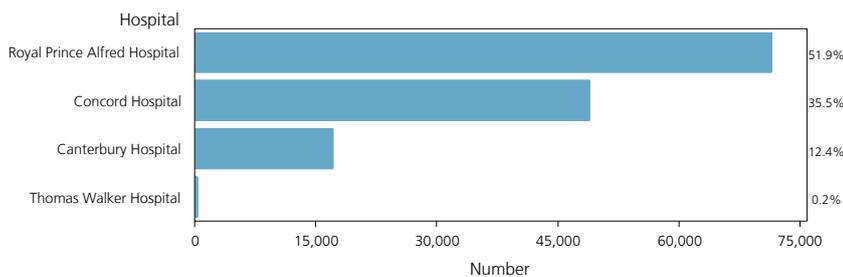

3.1 Hospitalisations: public acute and psychiatric hospitals

This section presents combined statistics for hospitalisations at public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals.

Statistics reported in this section include hospitalisations by:

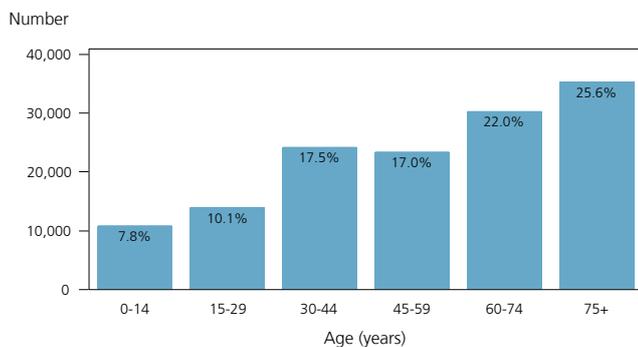

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Hospitalisations by hospital, Sydney LHD, 2010-11

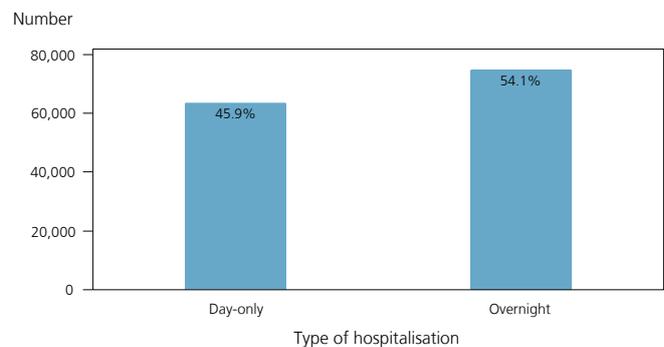

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Royal Prince Alfred Hospital includes RPA Institute of Rheumatology & Orthopaedics.

Hospitalisations by age, Sydney LHD, 2010-11

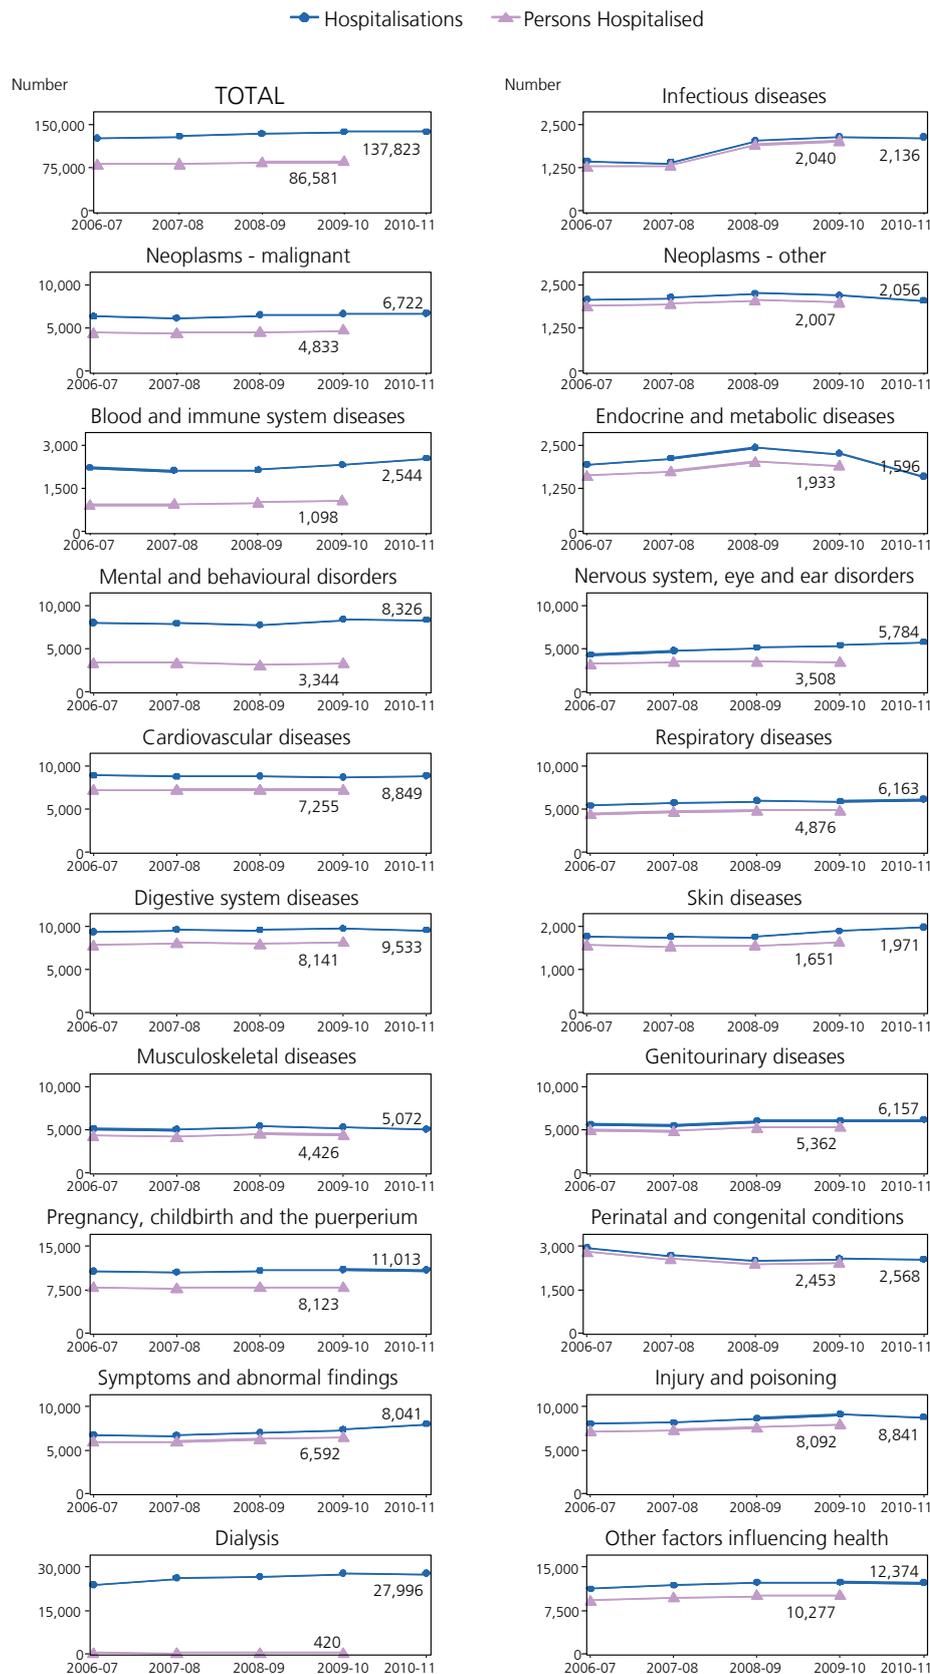

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Royal Prince Alfred Hospital includes RPA Institute of Rheumatology & Orthopaedics.

Hospitalisations by type—day-only and overnight, Sydney LHD, 2010-11

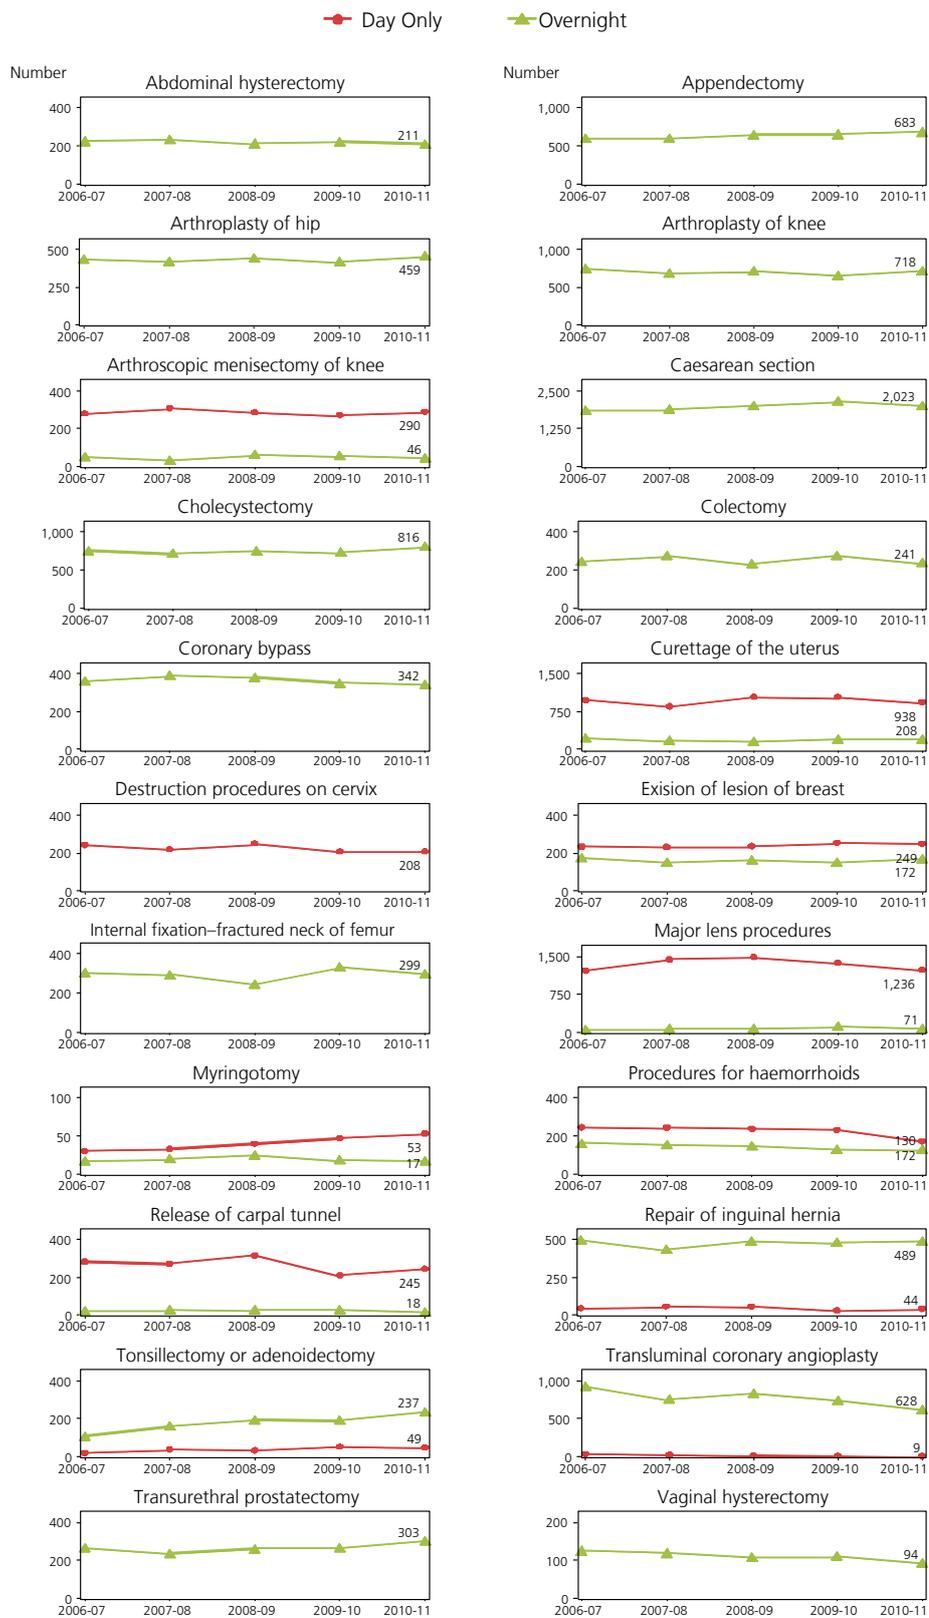

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Royal Prince Alfred Hospital includes RPA Institute of Rheumatology & Orthopaedics.

Hospitalisations and persons hospitalised by principal diagnosis, Sydney LHD, 2006-07 to 2010-11

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Royal Prince Alfred Hospital includes RPA Institute of Rheumatology & Orthopaedics. Data on persons hospitalised up to 2009-10 were available at the time of production. The fall in reporting of endocrine diseases is related to changes in the coding standards for diabetes (see the Appendix).

Hospitalisations for selected high volume procedures, Sydney LHD, 2006-07 to 2010-11

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Royal Prince Alfred Hospital includes RPA Institute of Rheumatology & Orthopaedics. Trend lines are not shown if counts are less than 10 for all years.

Source: NSW Admitted Patient Data Collection (HOIST). Centre for Epidemiology and Evidence, NSW Ministry of Health.

Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Royal Prince Alfred Hospital includes RPA Institute of Rheumatology & Orthopaedics. Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

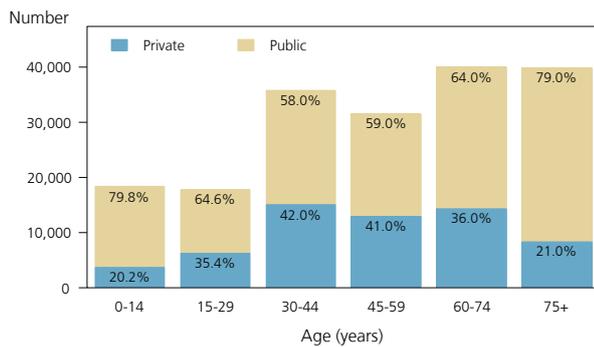

3.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Sydney LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

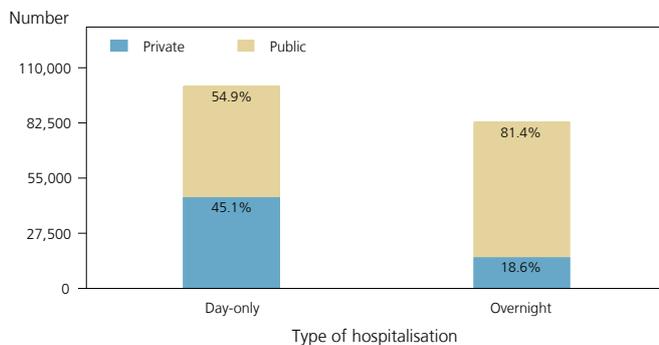

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Sydney LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Source: FLOWINFO Version 11.0, Statewide and Rural Health Services and Capital Planning Branch, NSW Ministry of Health.
 Note: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals.

Sydney LHD residents: hospitalisations in public and private hospitals by type—day-only and overnight, 2010-11

Source: FLOWINFO Version 11.0, Statewide and Rural Health Services and Capital Planning Branch, NSW Ministry of Health.
 Note: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals.

South Western Sydney Local Health District

In the 2010-11 financial year, there were 185,125 hospitalisations in the South Western Sydney LHD. Of these, 181,355 (98%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Bankstown-Lidcombe Hospital, Bowral and District Hospital, Camden Hospital, Campbelltown Hospital, Fairfield Hospital and Liverpool Hospital; and 3,770 (2%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 4.1 describes combined statistics for six public acute hospitals (Peer Group C2 District Group 2 and above).

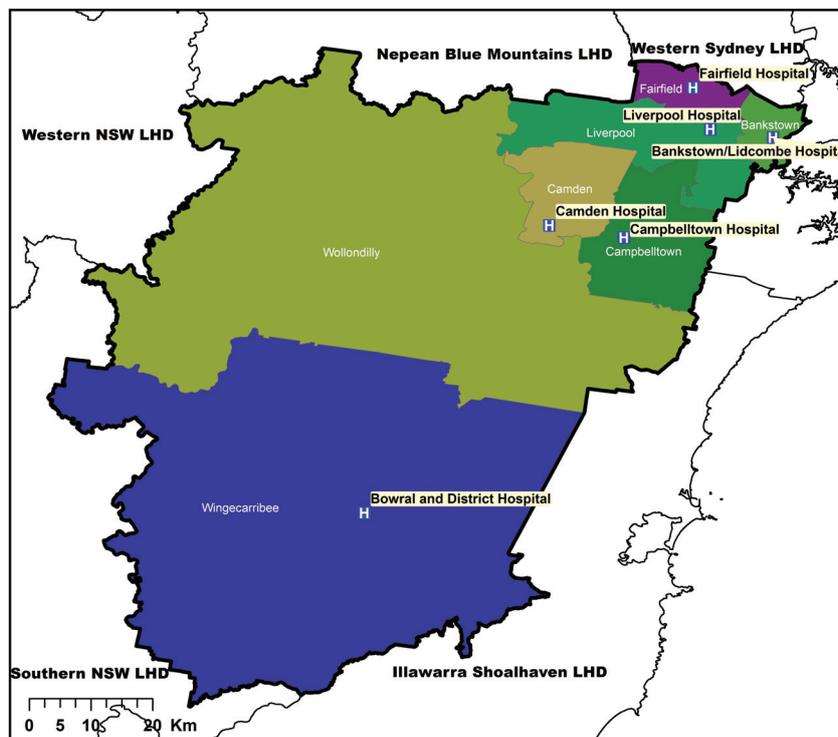

- Population statistics

Section 4.2 describes hospitalisations for South Western Sydney LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of South Western Sydney Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

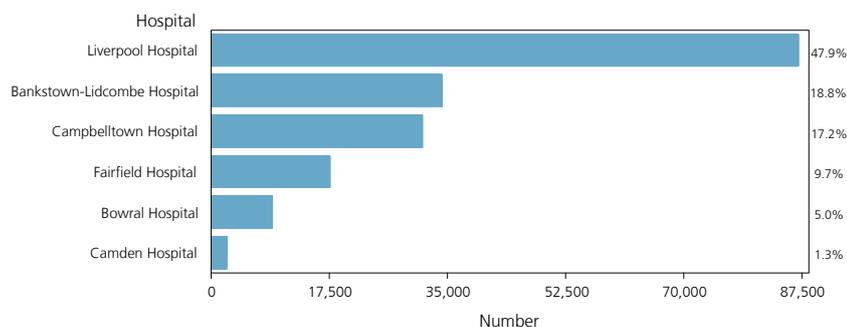

4.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above). Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

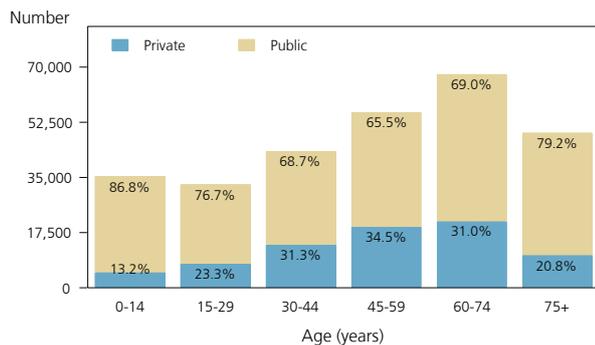

4.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of South Western Sydney LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

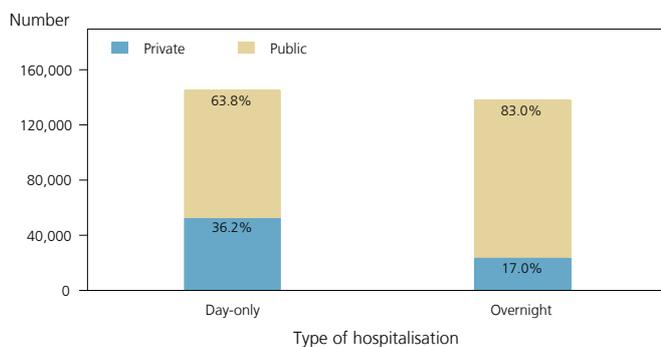

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

South Western Sydney LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Source: FLOWINFO Version 11.0, Statewide and Rural Health Services and Capital Planning Branch, NSW Ministry of Health.
 Note: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals.

Notes: Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

South Eastern Sydney Local Health District

In the 2010-11 financial year, there were 154,645 hospitalisations in the South Eastern Sydney LHD. Of these, 146,947 (95%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Prince of Wales Hospital, Royal Hospital for Women, St George Hospital, Sutherland Hospital, and Sydney Hospital and Sydney Eye Hospital; and 7,698 (5%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 5.1 describes combined statistics for five public acute hospitals (Peer Group C2 District Group 2 and above).

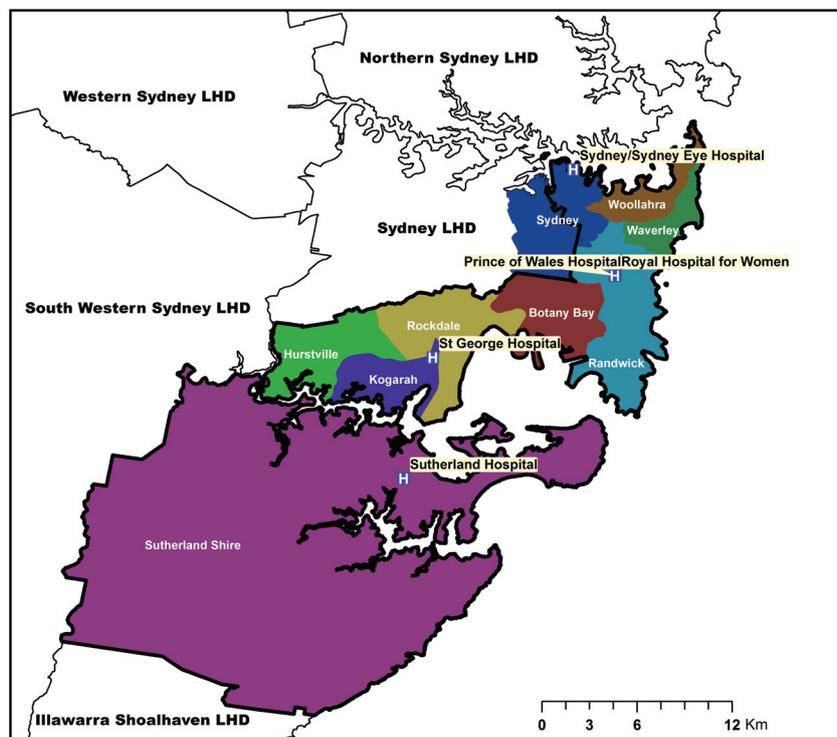

- Population statistics

Section 5.2 describes hospitalisations for South Eastern Sydney LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of South Eastern Sydney Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

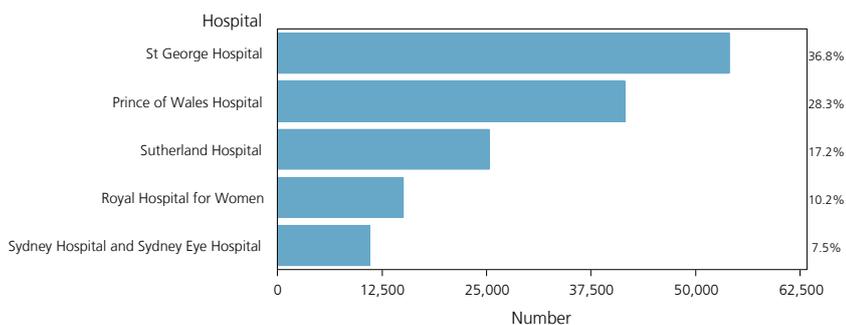

5.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

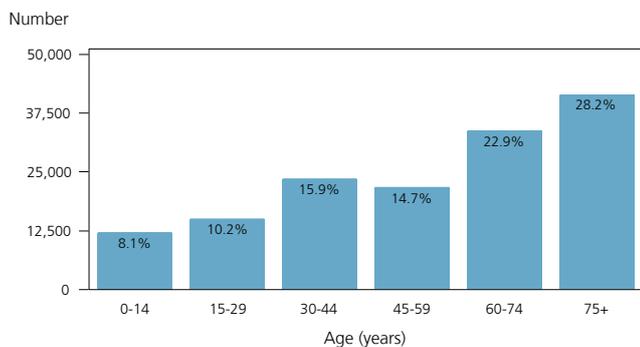

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Hospitalisations by hospital, South Eastern Sydney LHD, 2010-11

5.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of South Eastern Sydney LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

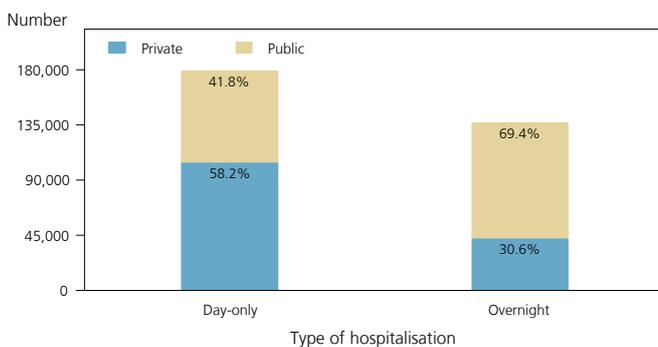

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Notes: Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

Illawarra Shoalhaven Local Health District

In the 2010-11 financial year, there were 97,020 hospitalisations in the Illawarra Shoalhaven LHD. Of these, 94,736 (98%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Bulli District Hospital, Milton and Ulladulla Hospital, Shellharbour Hospital, Shoalhaven and District Memorial Hospital and Wollongong Hospital; and 2,284 (2%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 6.1 describes combined statistics for five public acute hospitals (Peer Group C2 District Group 2 and above).

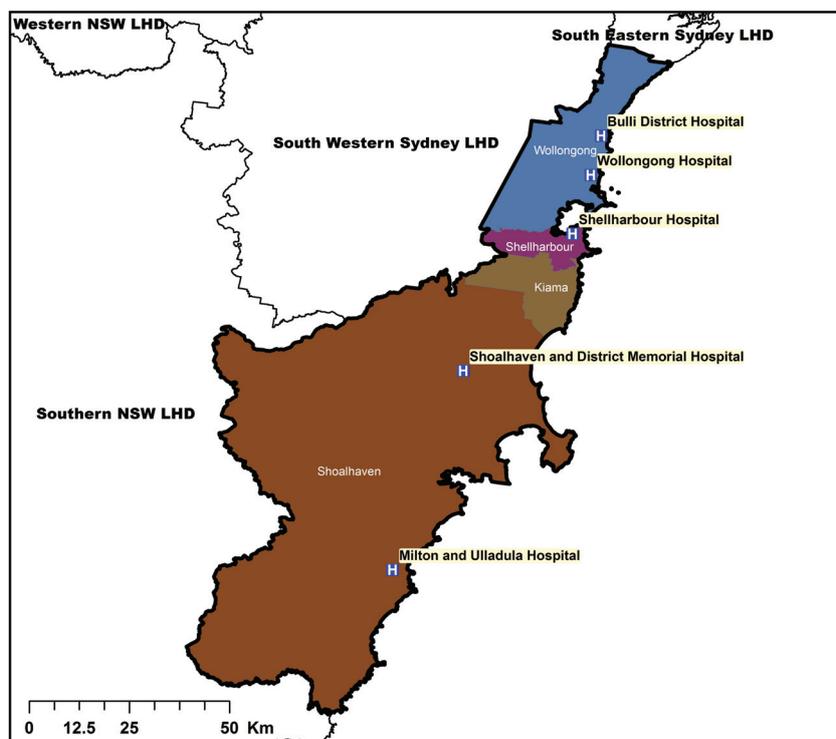

- Population statistics

Section 6.2 describes hospitalisations for Illawarra Shoalhaven LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Illawarra Shoalhaven Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

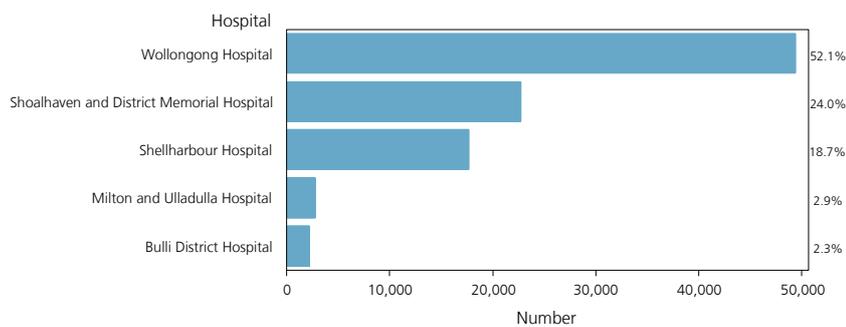

6.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

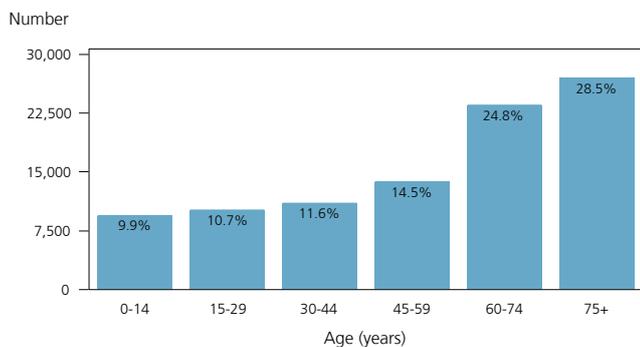

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Hospitalisations by hospital, Illawarra Shoalhaven LHD, 2010-11

6.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Illawarra Shoalhaven LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

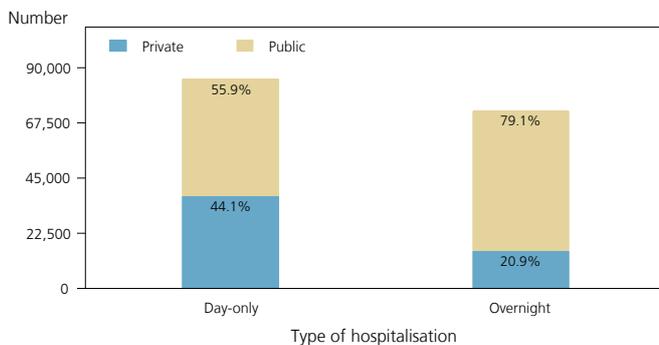

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

CHAPTER 7

Western Sydney Local Health District

In the 2010-11 financial year, there were 146,639 hospitalisations in the Western Sydney LHD, all of which occurred in the following public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals: Auburn Hospital, Blacktown Hospital, Cumberland Hospital, Mount Druitt Hospital and Westmead Hospital.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 7.1 describes combined statistics for four public acute hospitals (Peer Group C2 District Group 2 and above) and one psychiatric hospital (Peer Group F1).

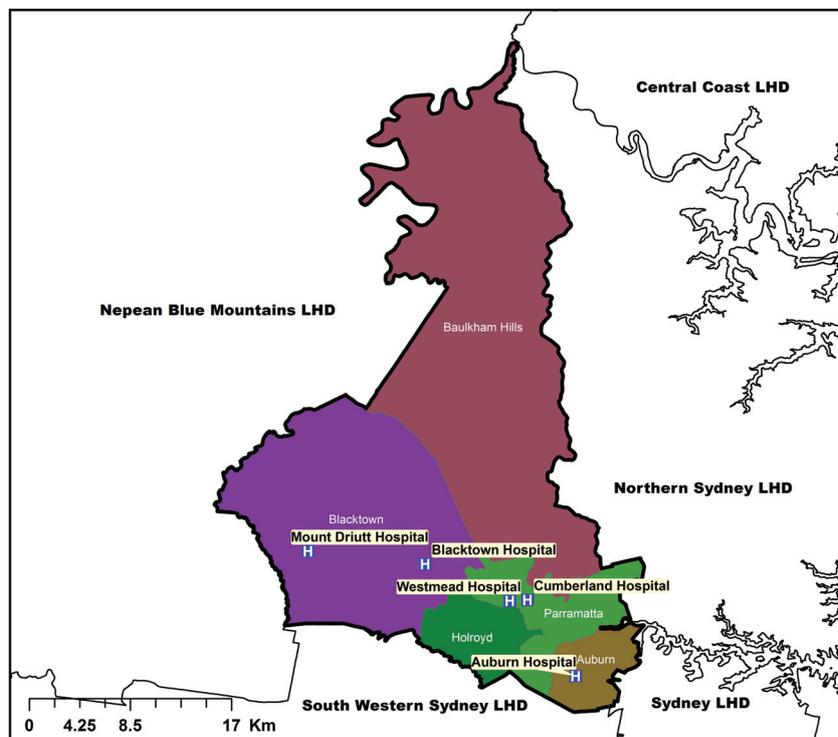

- Population statistics

Section 7.2 describes hospitalisations for Western Sydney LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Western Sydney Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

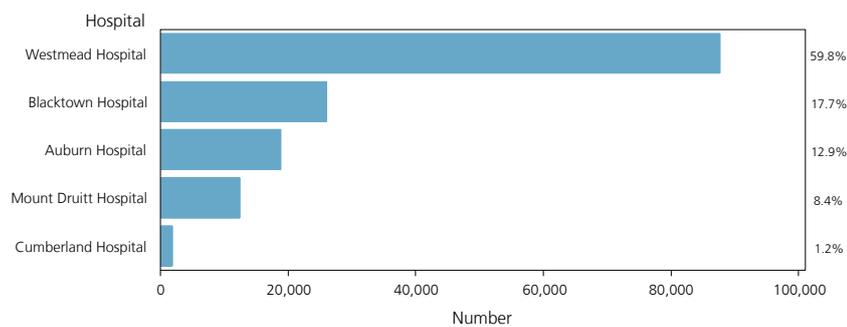

7.1 Hospitalisations: public acute and psychiatric hospitals

This section presents combined statistics for hospitalisations at public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals.

Statistics reported in this section include hospitalisations by:

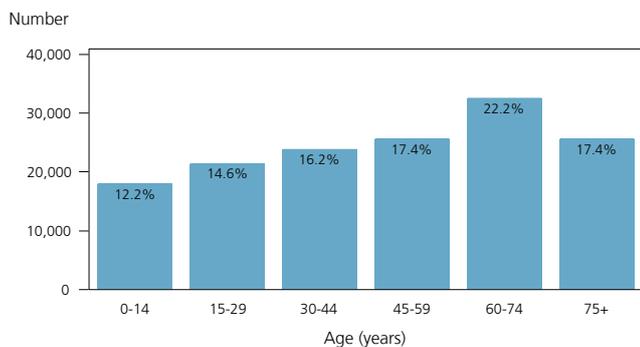

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Hospitalisations by hospital, Western Sydney LHD, 2010-11

Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

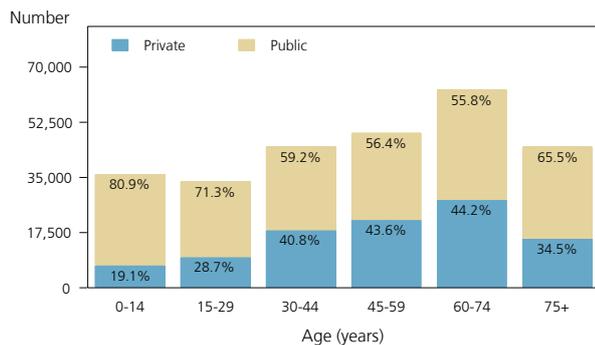

7.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Western Sydney LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

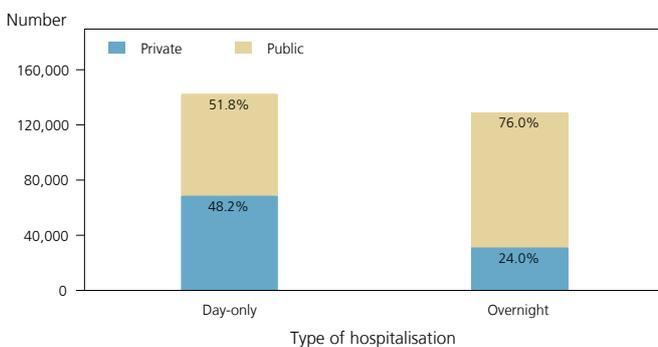

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Western Sydney LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Notes: Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

Nepean Blue Mountains Local Health District

In the 2010-11 financial year, there were 74,505 hospitalisations in the Nepean Blue Mountains LHD. Of these, 70,636 (95%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Blue Mountains District Anzac Memorial Hospital, Hawkesbury District Health Service (public contracted patients), Lithgow Health Service and Nepean Hospital; and 3,869 (5%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 8.1 describes combined statistics for four public acute hospitals (Peer Group C2 District Group 2 and above).

- Population statistics

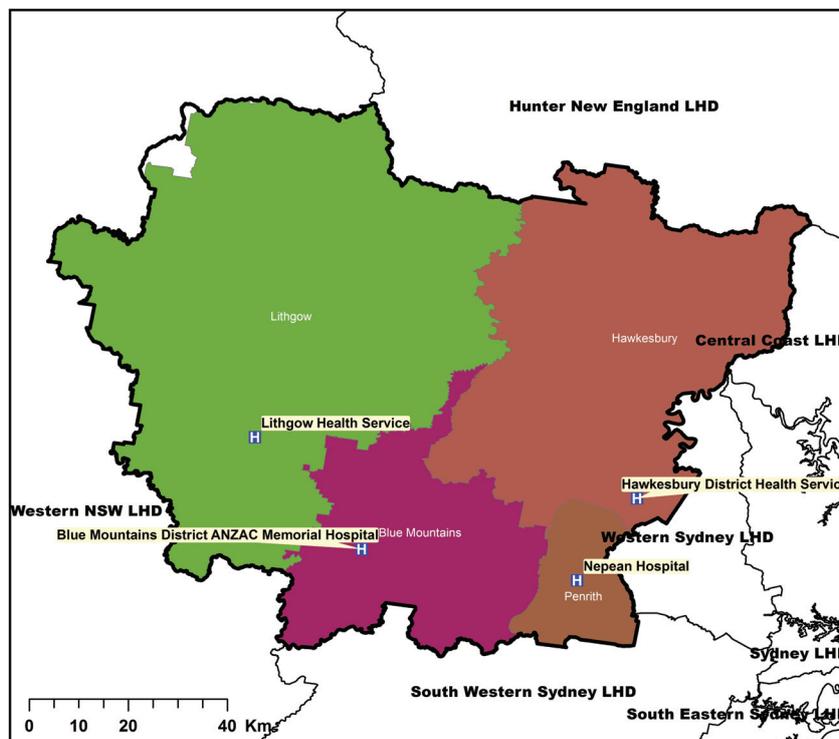

Section 8.2 describes hospitalisations for Nepean Blue Mountains LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Hawkesbury District Health Service is a private hospital which has a contract to provide public patient services. In 2010-11 more than two-thirds of hospitalisations (69.3%) were for public contracted patients. Hospitalisations for these public contracted patients are described here.

Map of Nepean Blue Mountains Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

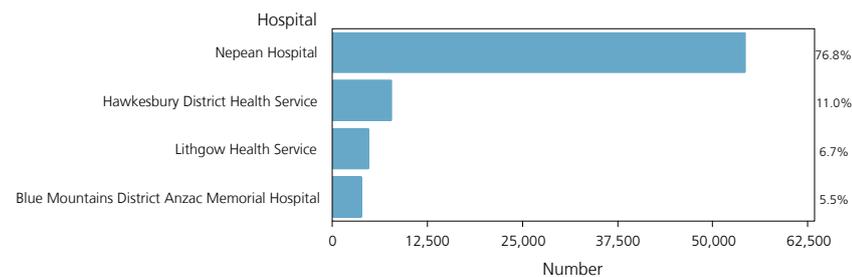

8.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

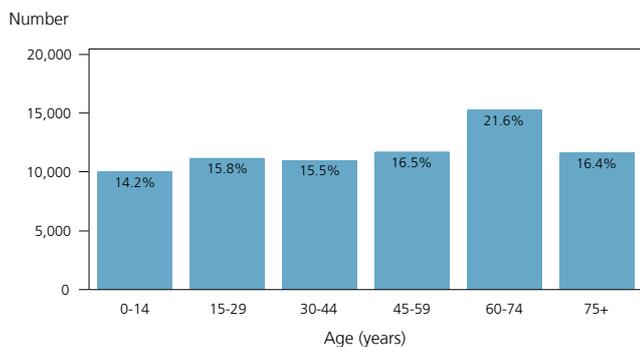

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Source: NSW Admitted Patient Data Collection (HOIST). Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above). Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

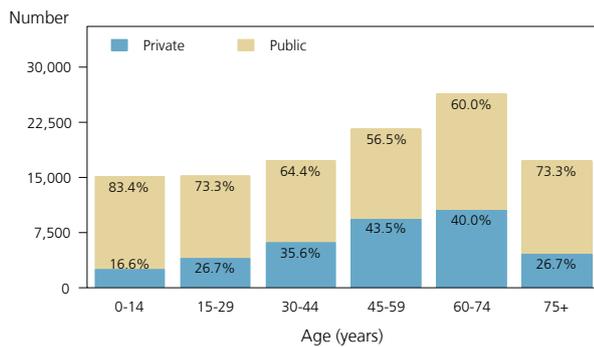

8.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Nepean Blue Mountains LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

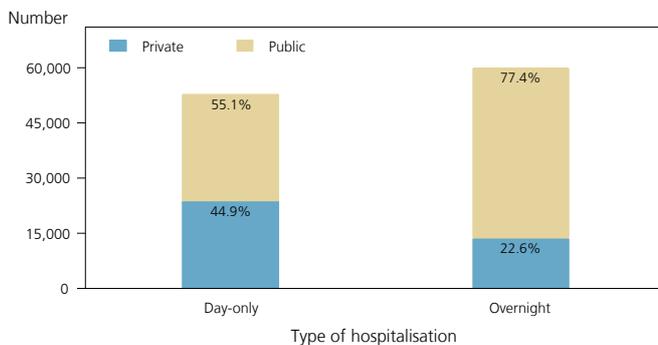

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Northern Sydney Local Health District

In the 2010-11 financial year, there were 119,275 hospitalisations in the Northern Sydney LHD. Of these, 109,920 (92%) occurred in the following public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals: Coral Tree Family Centre, Hornsby and Ku-Ring-Gai Hospital, Macquarie Hospital, Manly District Hospital, Mona Vale and District Hospital, Royal North Shore Hospital and Ryde Hospital; and 9,355 (8%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 9.1 describes combined statistics for five public acute hospitals (Peer Group C2 District Group 2 and above) and two psychiatric hospitals (Peer Group F1).

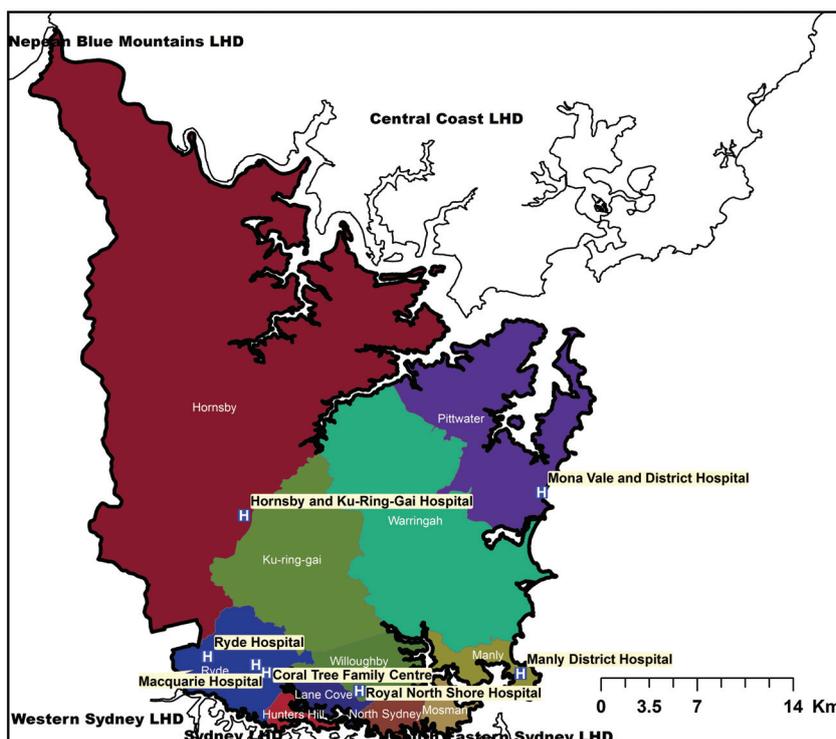

- Population statistics

Section 9.2 describes hospitalisations for Northern Sydney LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Northern Sydney Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

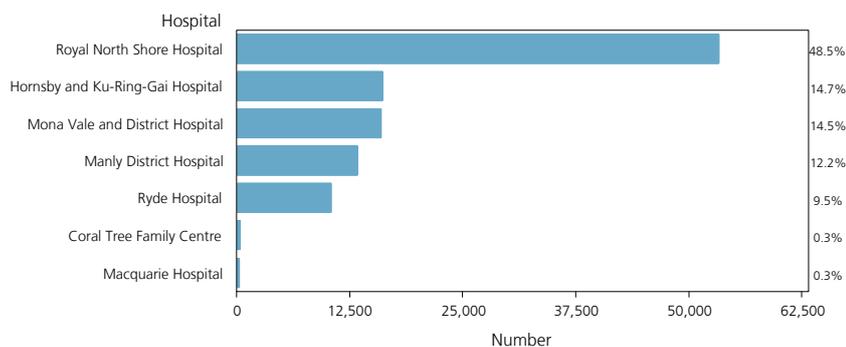

9.1 Hospitalisations: public acute and psychiatric hospitals

This section presents combined statistics for hospitalisations at public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals.

Statistics reported in this section include hospitalisations by:

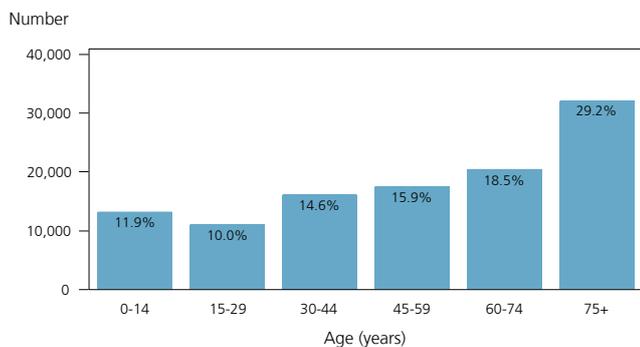

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

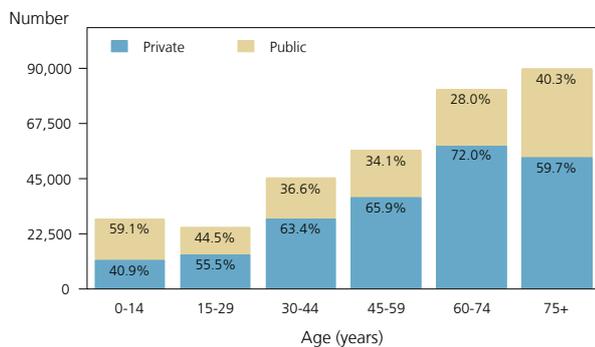

9.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Northern Sydney LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

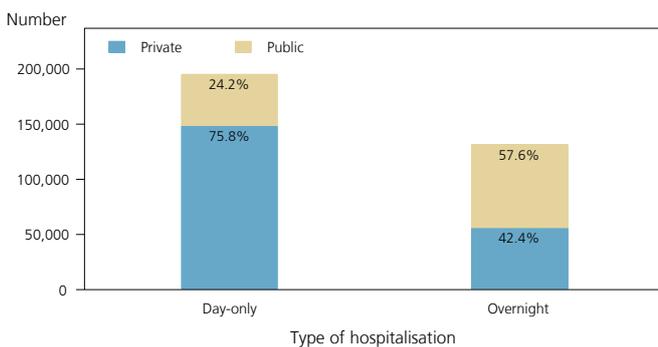

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Northern Sydney LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Source: FLOWINFO Version 11.0, Statewide and Rural Health Services and Capital Planning Branch, NSW Ministry of Health.
Note: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals.

Central Coast Local Health District

In the 2010-11 financial year, there were 75,294 hospitalisations in the Central Coast LHD. Of these, 74,264 (99%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Gosford Hospital and Wyong Hospital; and 1,030 (1%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 10.1 describes combined statistics for two public acute hospitals (Peer Group C2 District Group 2 and above).

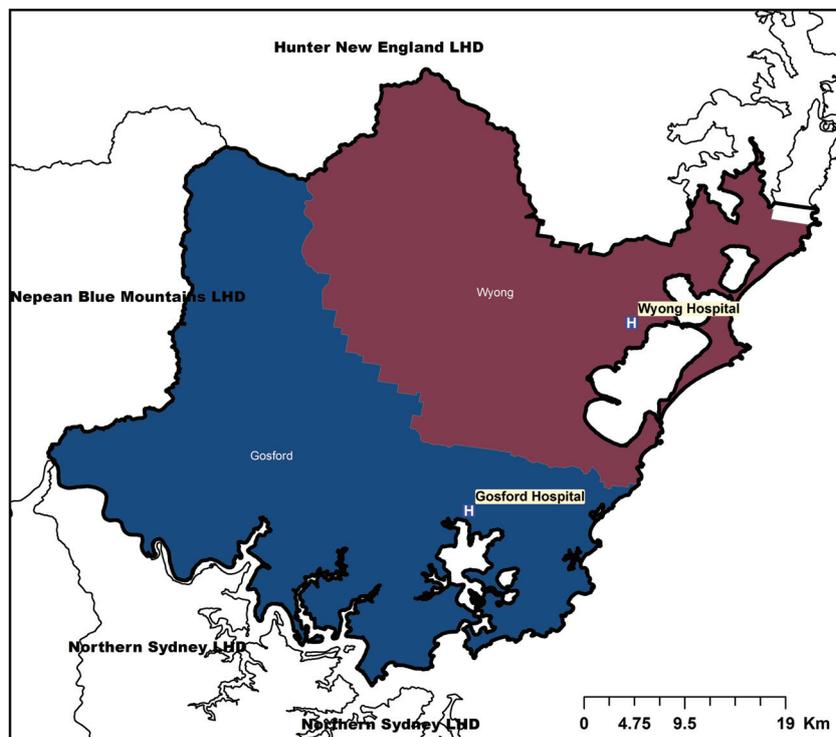

- Population statistics

Section 10.2 describes hospitalisations for Central Coast LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Central Coast Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

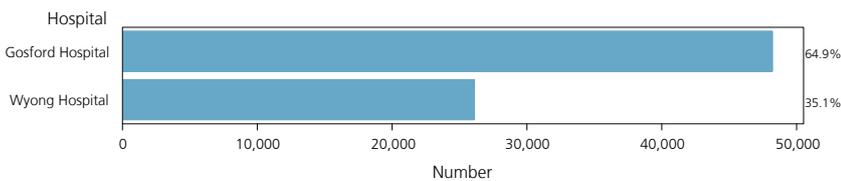

10.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

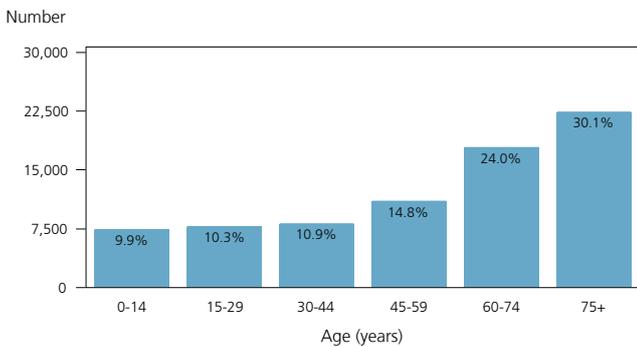

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

10.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Central Coast LHD residents in NSW public and private hospitals and interstate public hospitals, including:

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

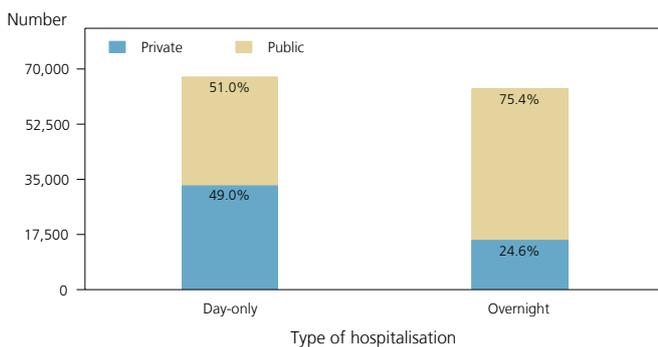

- age
- day-only and overnight admissions
- Service Related Group

Central Coast LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Source: FLOWINFO Version 11.0, Statewide and Rural Health Services and Capital Planning Branch, NSW Ministry of Health.
 Note: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals.

Hunter New England Local Health District

In the 2010-11 financial year, there were 199,757 hospitalisations in the Hunter New England LHD. Of these, 190,327 (95%) occurred in the following public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals: Armidale Hospital, Belmont Hospital, Calvary Mater Newcastle, Cessnock District Hospital, Gunnedah District Hospital, Hunter New England Mater Mental Health Hospital, Inverell District Hospital, John Hunter Hospital, Kurri Kurri District Hospital, Maitland Hospital, Manning Hospital, Moree District Hospital, Morisset Hospital, Muswellbrook District Hospital, Narrabri District Hospital, Singleton District Hospital and Tamworth Hospital; and 9,430 (5%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 11.1 describes combined statistics for fifteen public acute hospitals (Peer Group C2 District Group 2 and above) and two psychiatric hospitals (Peer Group F1).

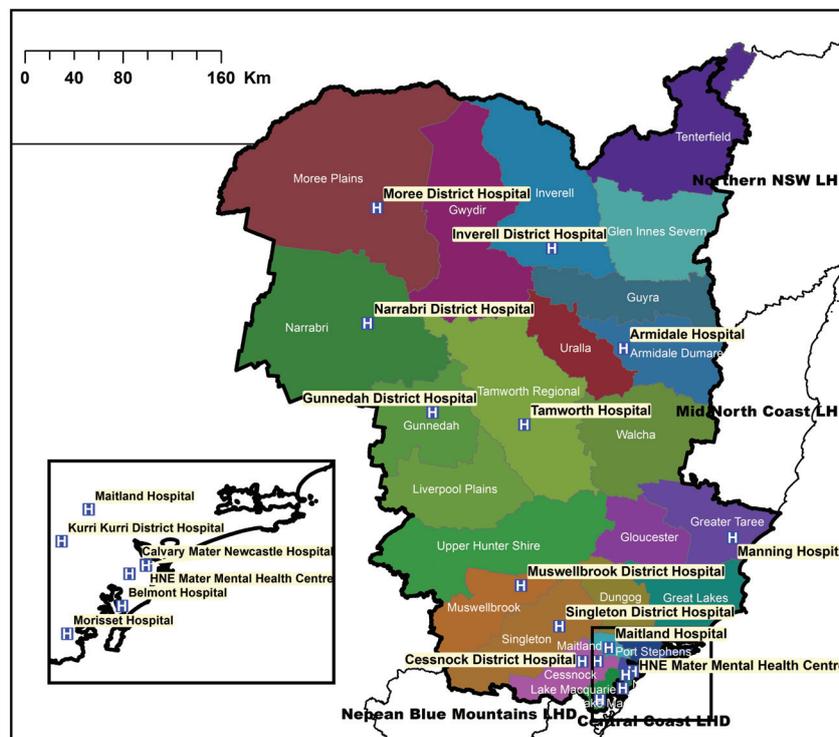

- Population statistics

Section 11.2 describes hospitalisations for Hunter New England LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Hunter New England Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

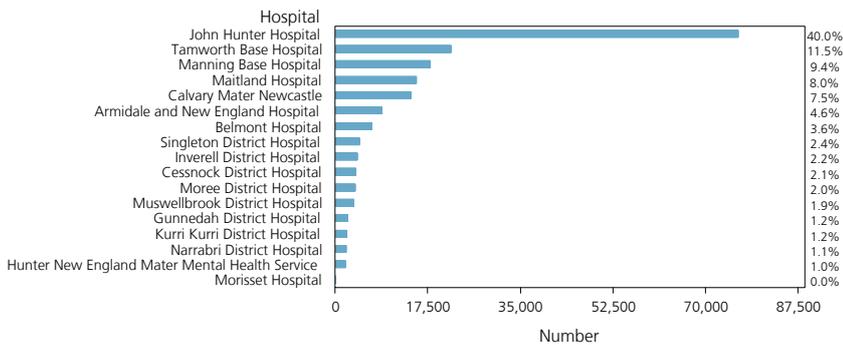

11.1 Hospitalisations: public acute and psychiatric hospitals

This section presents combined statistics for hospitalisations at public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals.

Statistics reported in this section include hospitalisations by:

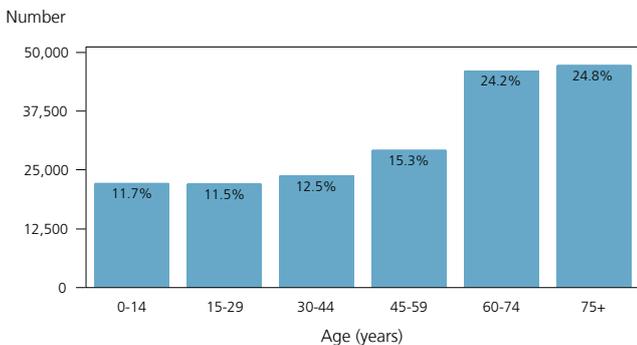

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

11.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Hunter New England LHD residents in NSW public and private hospitals and interstate public hospitals, including:

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

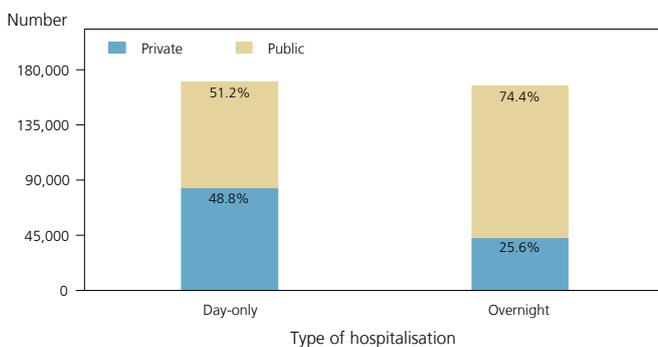

- age
- day-only and overnight admissions
- Service Related Group

Hunter New England LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Northern NSW Local Health District

In the 2010-11 financial year, there were 96,226 hospitalisations in the Northern NSW LHD. Of these, 92,555 (96%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Ballina District Hospital, Casino and District Memorial Hospital, Grafton Base Hospital, Lismore Base Hospital, Maclean District Hospital, Murwillumbah District Hospital and The Tweed Hospital; and 3,671 (4%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 12.1 describes combined statistics for seven public acute hospitals (Peer Group C2 District Group 2 and above).

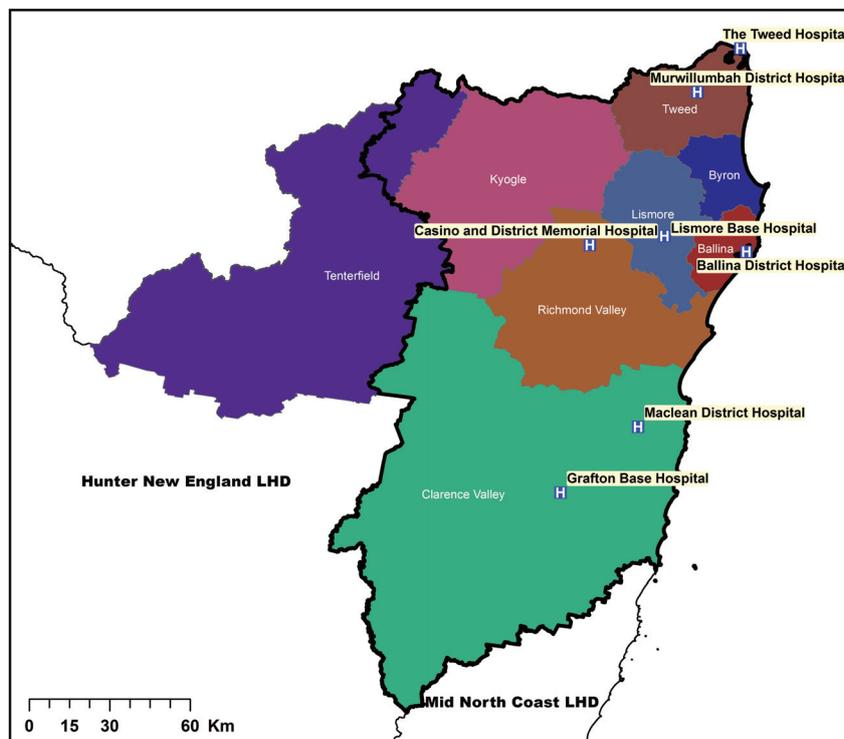

- Population statistics

Section 12.2 describes hospitalisations for Northern NSW LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Northern NSW Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

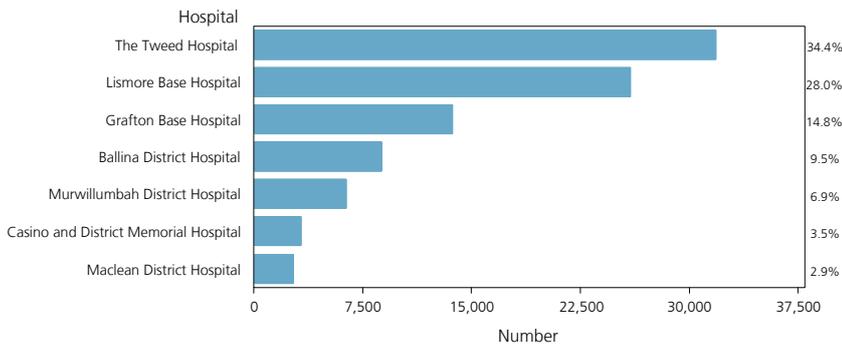

12.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

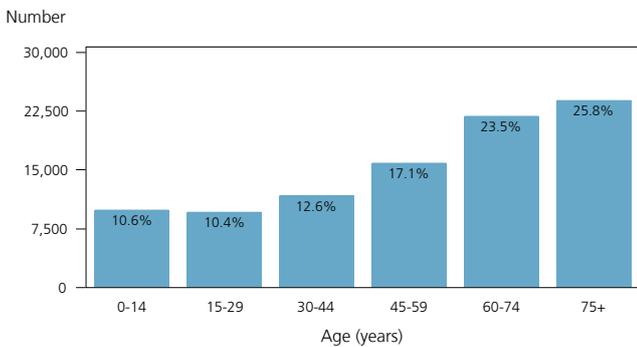

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- elected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

	TOTAL	994	100.0	1,043	100.0	1,043	100.0	1,001	100.0	1,072	100.0

Source: NSW Admitted Patient Data Collection (HOIST). Centre for Epidemiology and Evidence, NSW Ministry of Health.
Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above). Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

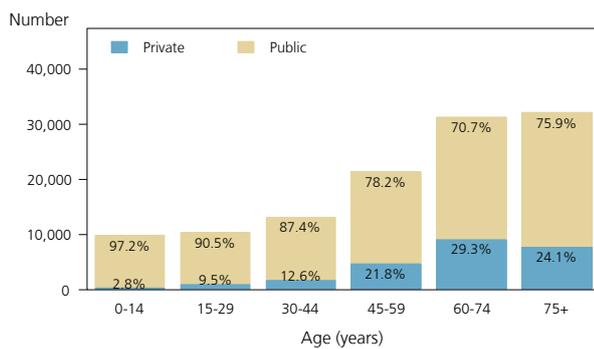

12.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Northern NSW LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

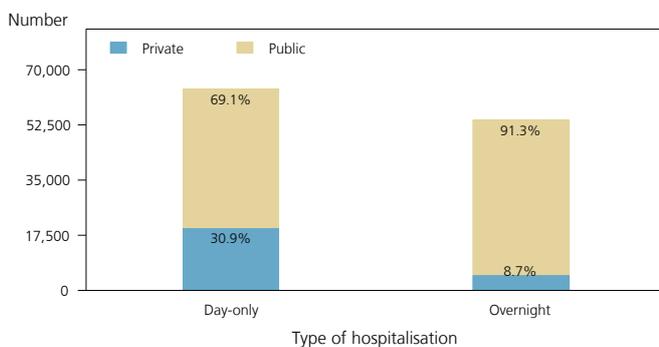

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Northern NSW LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Source: FLOWINFO Version 11.0, Statewide and Rural Health Services and Capital Planning Branch, NSW Ministry of Health.
 Note: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals.

Notes: Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

Mid North Coast Local Health District

In the 2010-11 financial year, there were 65,245 hospitalisations in the Mid North Coast LHD. Of these, 62,784 (96%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Bellinger River District Hospital, Coffs Harbour Base Hospital, Kempsey Hospital, Macksville District Hospital and Port Macquarie Base Hospital; and 2,461 (4%) occurred in one other public hospital.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 13.1 describes combined statistics for five public acute hospitals (Peer Group C2 District Group 2 and above).

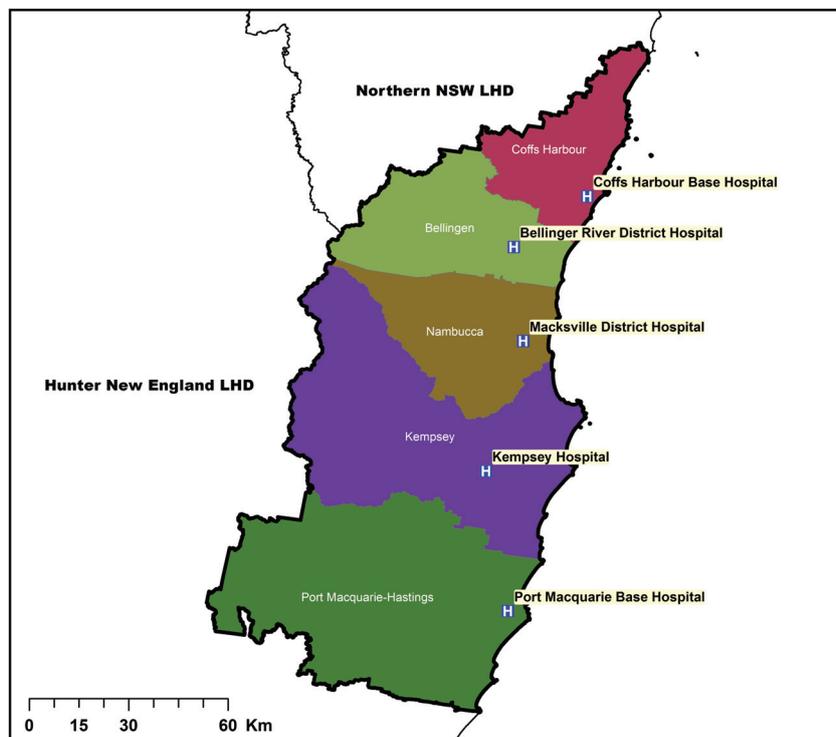

- Population statistics

Section 13.2 describes hospitalisations for Mid North Coast LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Mid North Coast Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

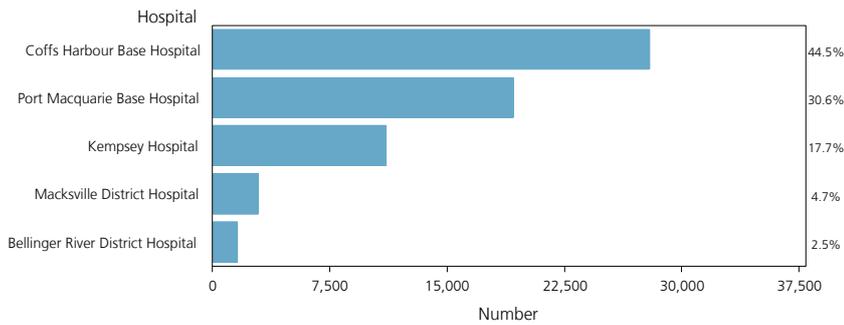

13.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

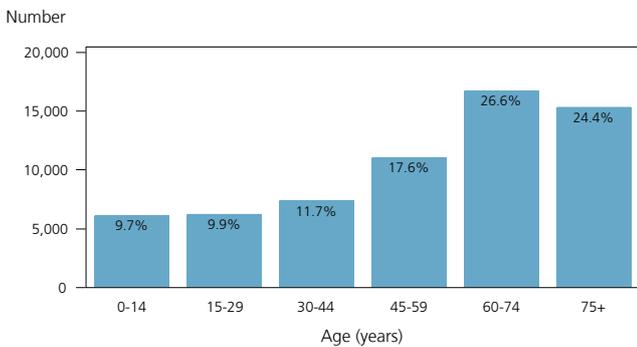

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Hospitalisations by hospital, Mid North Coast LHD, 2010-11

13.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Mid North Coast LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

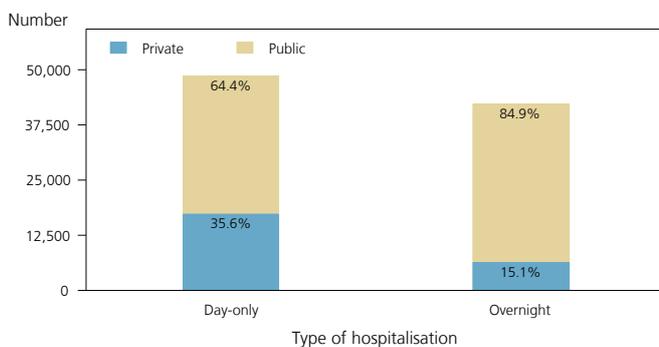

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Southern NSW Local Health District

In the 2010-11 financial year, there were 44,892 hospitalisations in the Southern NSW LHD. Of these, 40,083 (89%) occurred in the following public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals: Bateman’s Bay District Hospital, Bega District Hospital, Cooma Health Service, Goulburn Base Hospital, Kenmore Psychiatric Hospital, Moruya District Hospital and Queanbeyan Health Service; and 4,809 (11%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 14.1 describes combined statistics for six public acute hospitals (Peer Group C2 District Group 2 and above) and one psychiatric hospital (Peer Group F1).

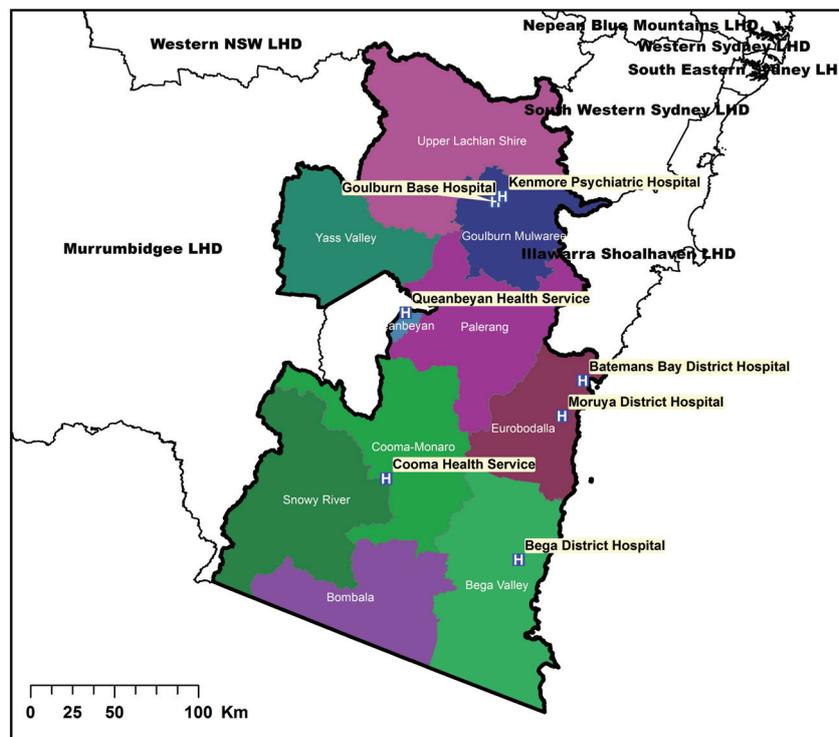

- Population statistics

Section 14.2 describes hospitalisations for Southern NSW LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Southern NSW Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

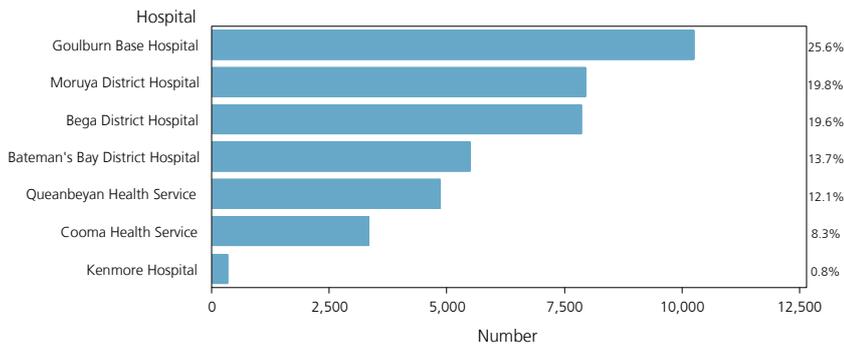

14.1 Hospitalisations: public acute and psychiatric hospitals

This section presents combined statistics for hospitalisations at public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals.

Statistics reported in this section include hospitalisations by:

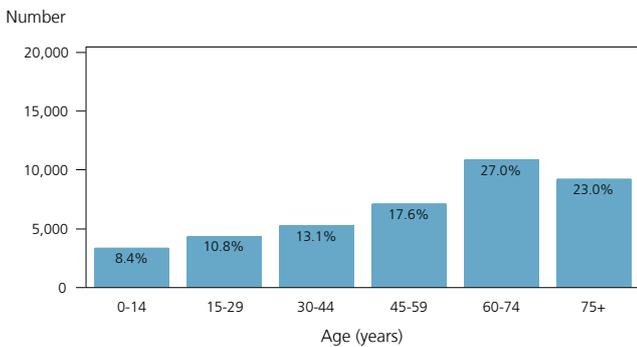

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

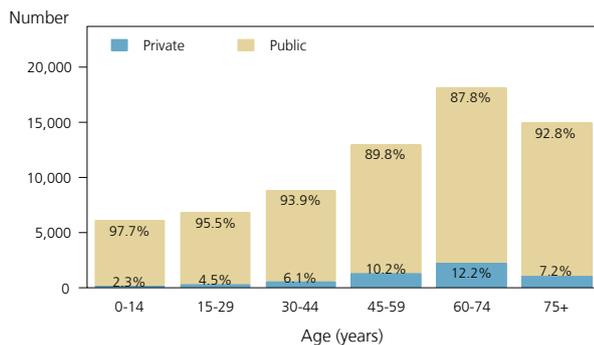

14.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Southern NSW LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

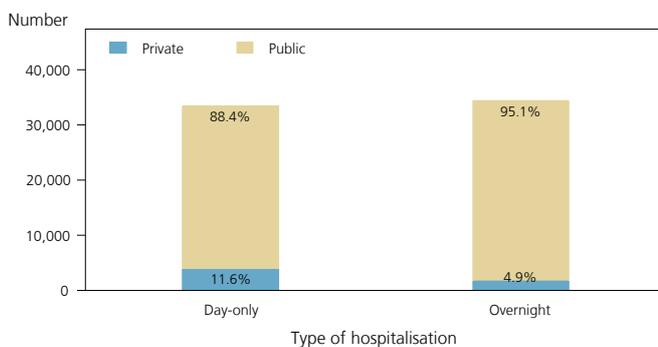

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Southern NSW LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Notes: Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

Murrumbidgee Local Health District

In the 2010-11 financial year, there were 58,631 hospitalisations in the Murrumbidgee LHD. Of these, 44,551 (76%) occurred in the following public acute hospitals (Peer Group C2 District Group 2 and above): Deniliquin Health Service, Griffith Base Hospital, Tumut Health Service, Wagga Wagga Base Hospital and Young Health Service; and 14,080 (24%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 16.1 describes combined statistics for five public acute hospitals (Peer Group C2 District Group 2 and above).

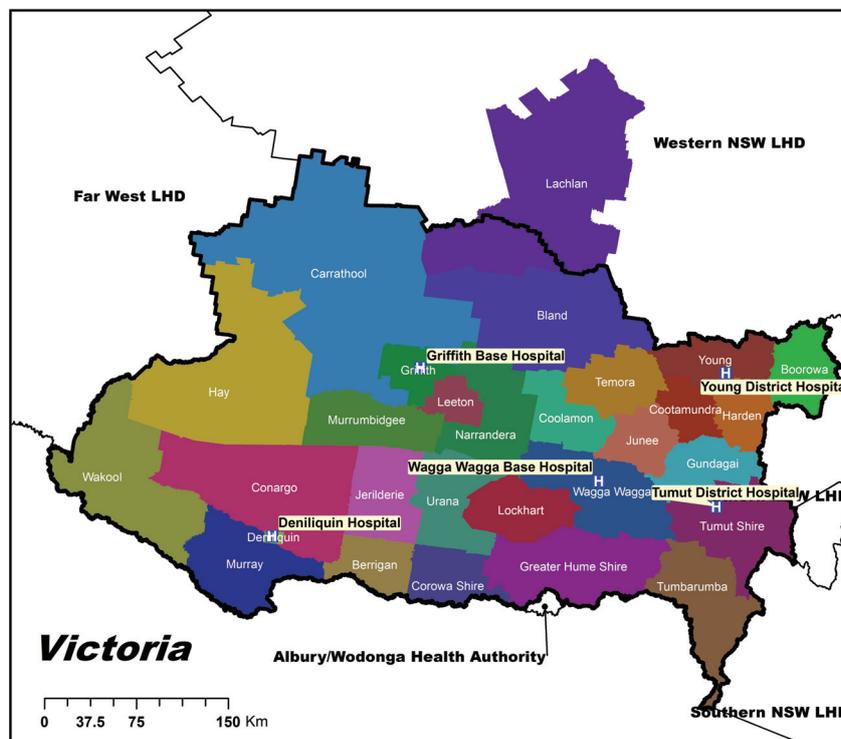

- Population statistics

Section 15.2 describes hospitalisations for Murrumbidgee LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

Map of Murrumbidgee Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

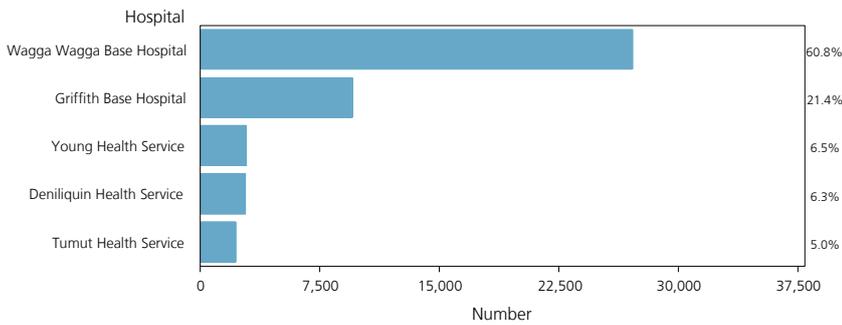

15.1 Hospitalisations: public acute hospitals

This section presents combined statistics for hospitalisations at public acute hospitals (Peer Group C2 District Group 2 and above).

Statistics reported in this section include hospitalisations by:

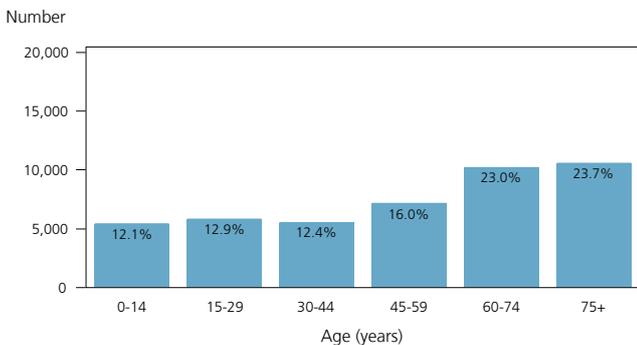

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Hospitalisations by hospital, Murrumbidgee LHD, 2010-11

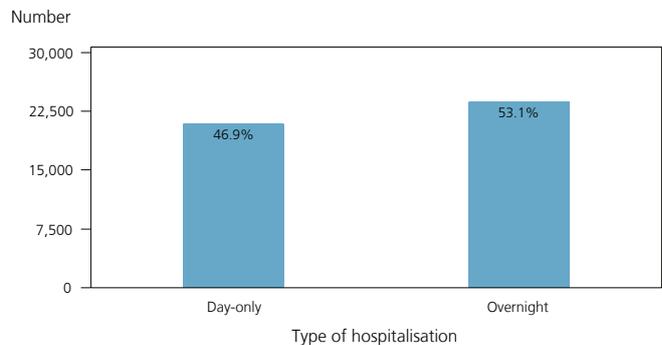

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above). Excludes Albury Base Hospital.

Hospitalisations by age, Murrumbidgee LHD, 2010-11

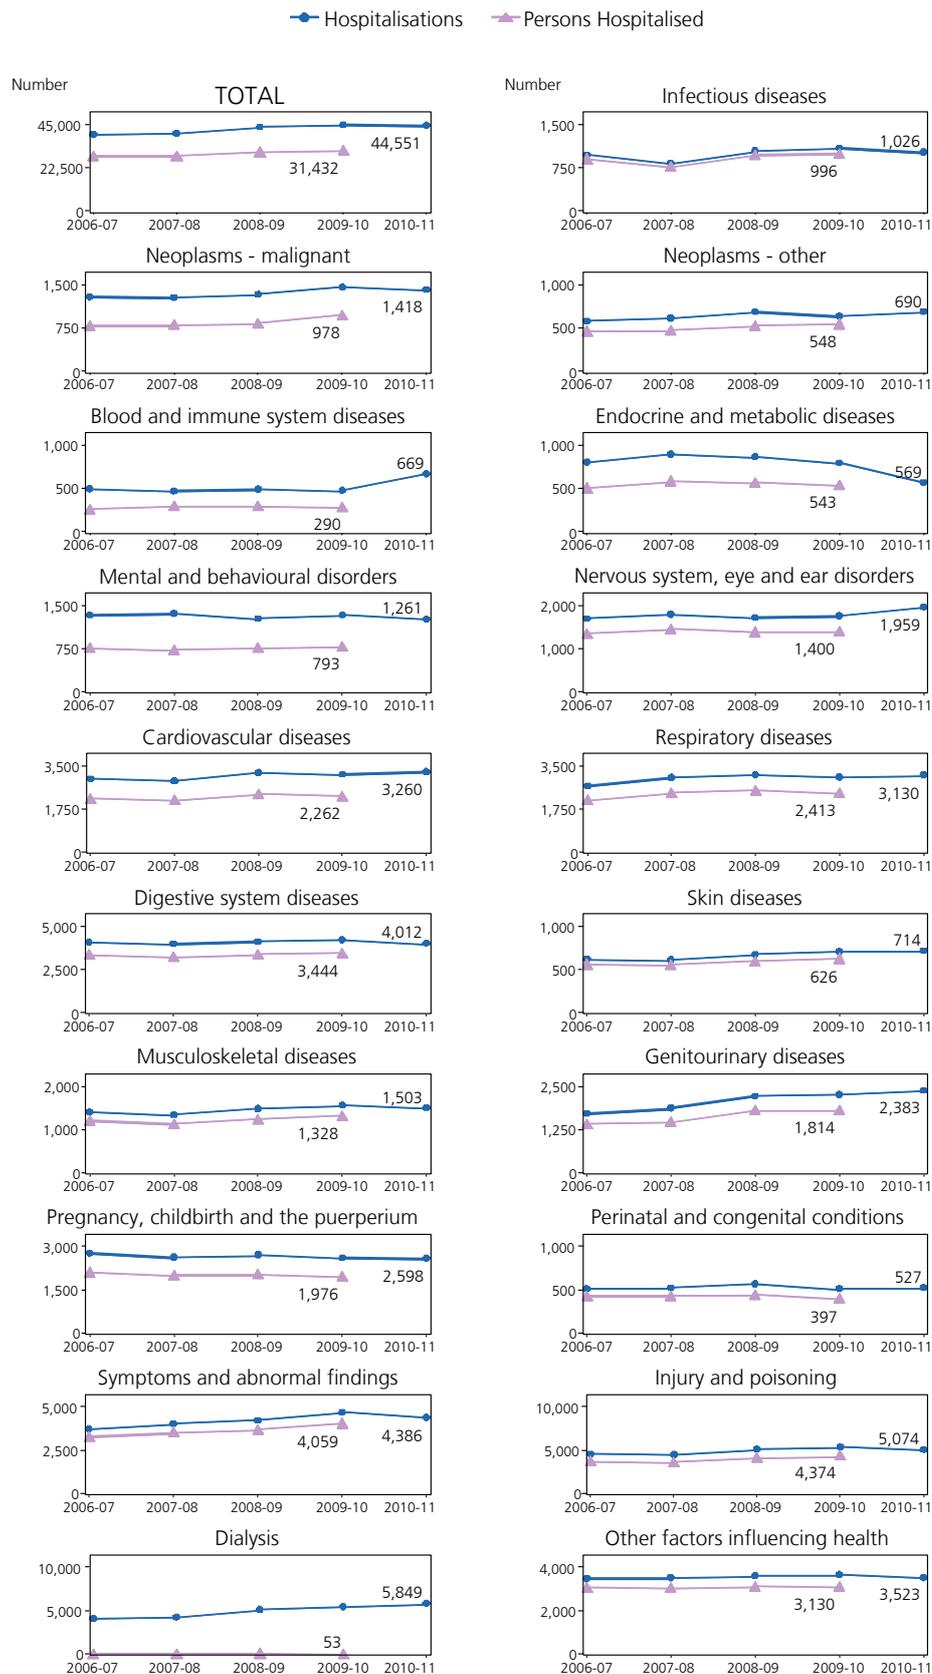

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above). Excludes Albury Base Hospital.

Hospitalisations by type—day-only and overnight, Murrumbidgee LHD, 2010

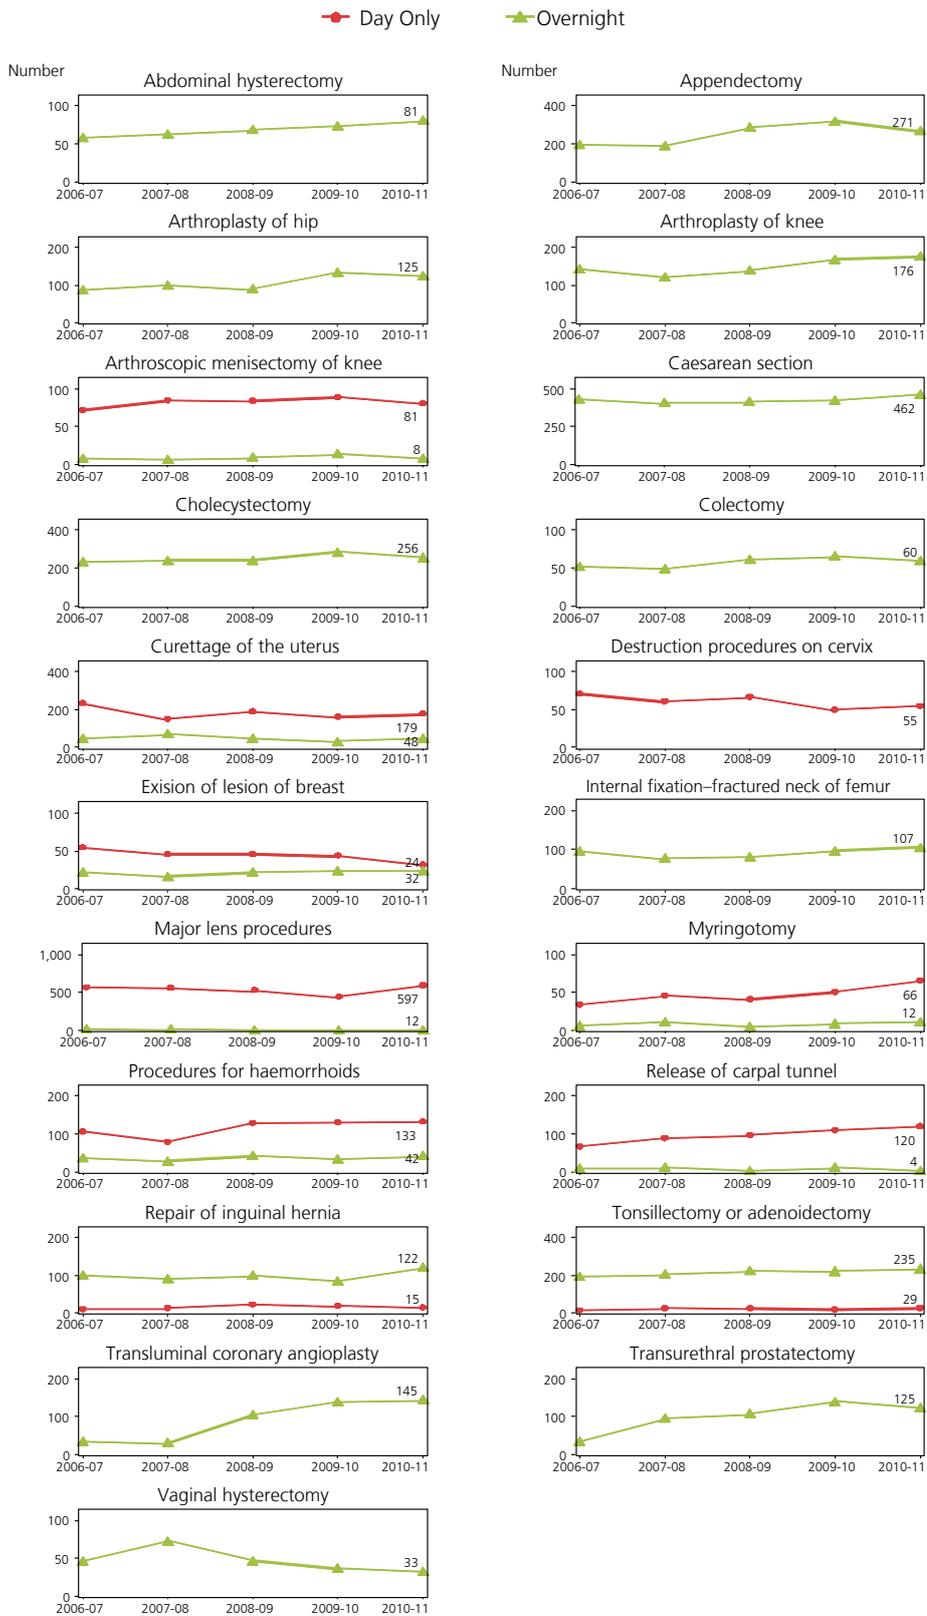

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above). Excludes Albury Base Hospital.

Hospitalisations and persons hospitalised by principal diagnosis, Murrumbidgee LHD, 2006-07 to 2010-11

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above). Excludes Albury Base Hospital. Data on persons hospitalised up to 2009-10 were available at the time of production. The fall in reporting of endocrine diseases is related to changes in the coding standards for diabetes (see the Appendix).

Hospitalisations for selected high volume procedures, Murrumbidgee LHD, 2006-07 to 2010-11

Source: NSW Admitted Patient Data Collection (HOIST), Centre for Epidemiology and Evidence, NSW Ministry of Health.
 Notes: Includes public acute hospitals (Peer Group C2 District Group 2 and above).
 Excludes Albury Base Hospital. Trend lines are not shown if counts are less than 10 for all years.

15.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Murrumbidgee LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

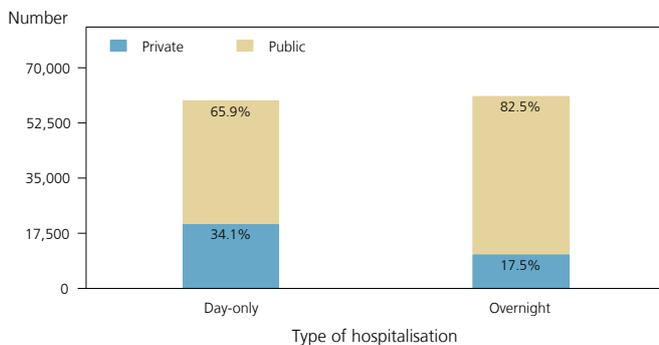

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Western NSW Local Health District

In the 2010-11 financial year, there were 74,670 hospitalisations in the Western NSW LHD. Of these, 66,731 (89%) occurred in the following public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals: Bathurst Base Hospital, Bloomfield Hospital, Cowra District Hospital, Dubbo Base Hospital, Forbes District Hospital, Mudgee District Hospital, Orange Base hospital and Parkes District Hospital; and 7,939 (11%) occurred in other public hospitals.

This chapter describes three sets of statistics:

- Overall hospital statistics

Section 16.1 describes combined statistics for seven public acute hospitals (Peer Group C2 District Group 2 and above) and one psychiatric hospital (Peer Group F1).

Map of Western NSW Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

- Population statistics

Section 16.2 describes hospitalisations for Western NSW LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

- Statistics for individual hospitals

The remaining sections describe hospitalisations for the individual hospitals listed above.

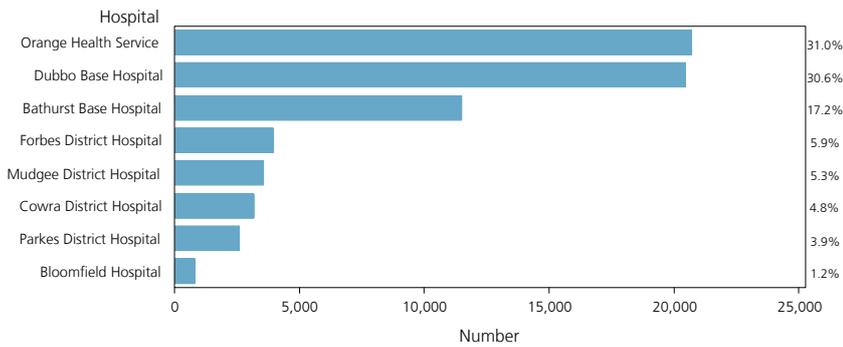

16.1 Hospitalisations: public acute and psychiatric hospitals

This section presents combined statistics for hospitalisations at public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals.

Statistics reported in this section include hospitalisations by:

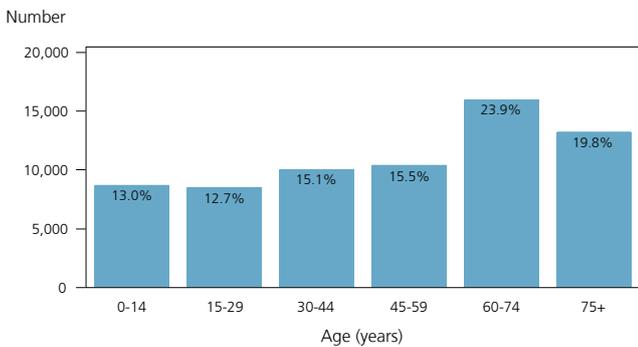

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Notes: Includes public acute (Peer Group C2 District Group 2 and above) and psychiatric (Peer Group F1) hospitals. Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

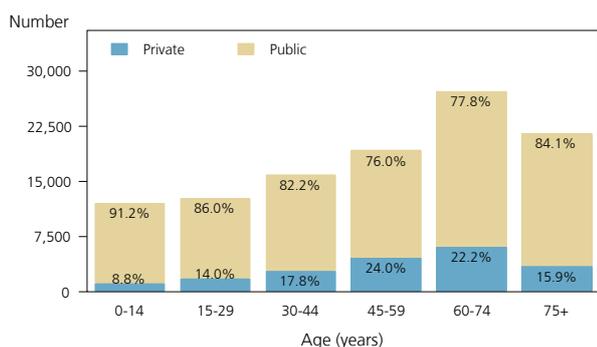

16.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Western NSW LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

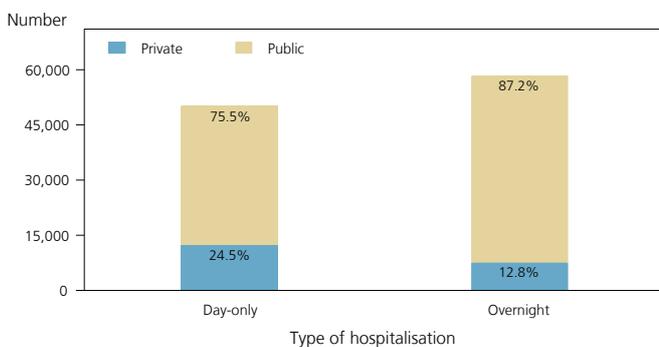

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Western NSW LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Source: FLOWINFO Version 11.0, Statewide and Rural Health Services and Capital Planning Branch, NSW Ministry of Health.
Note: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals.

Far West Local Health District

In the 2010-11 financial year, there were 7,440 hospitalisations in the Far West LHD. Of these, 7,400 (99%) occurred in Broken Hill Base Hospital (Peer Group C1) and 40 (1%) occurred in Wentworth District Hospital.

This chapter describes two sets of statistics:

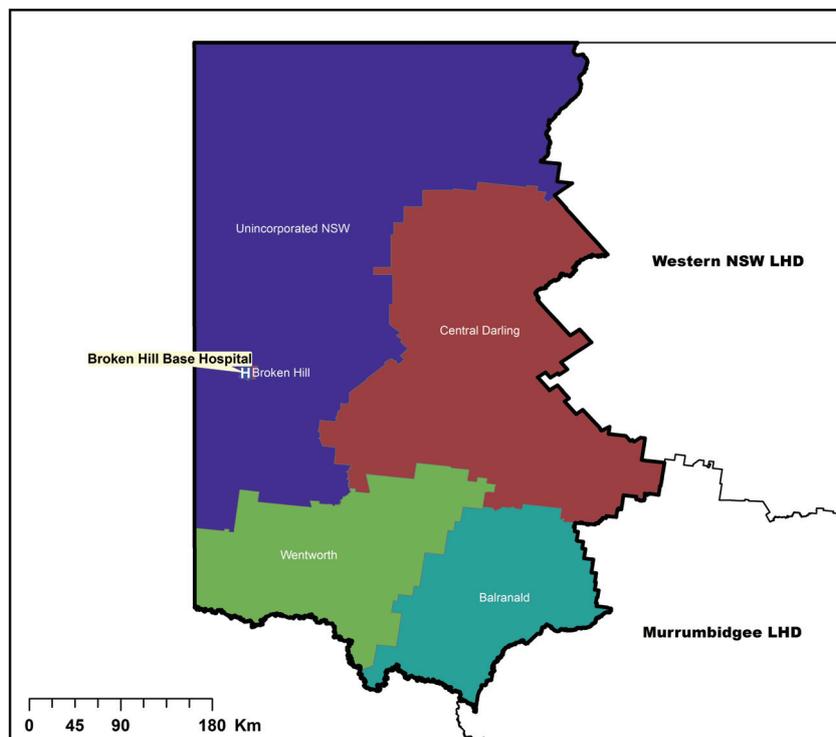

- Overall hospital statistics

Section 17.1 describes combined statistics for the Broken Hill Base Hospital (Peer Group C1).

- Population statistics

Section 17.2 hospitalisations for Far West LHD residents that occurred in NSW public and private hospitals and interstate public hospitals.

Map of Far West Local Health District

Note: Local government area boundaries (2008) are shown within the LHD boundary.

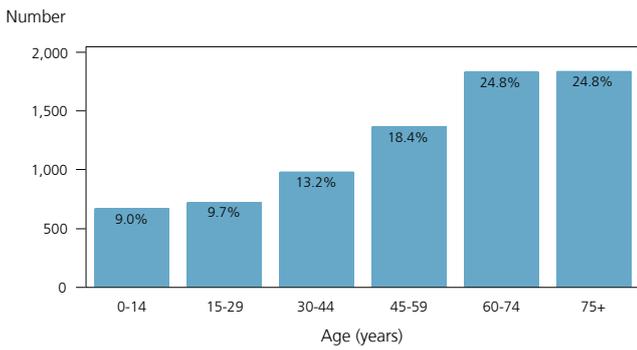

17.1 Hospitalisations: Broken Hill Base Hospital

This section presents combined statistics for hospitalisations at the Broken Hill Base Hospital (Peer Group C1).

Statistics reported in this section include hospitalisations by:

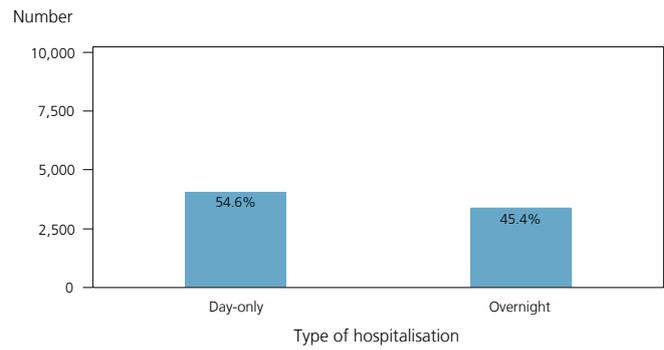

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

17.2 Residents: hospitalisations in public and private hospitals

This section describes hospitalisations of Far West LHD residents in NSW public and private hospitals and interstate public hospitals, including:

- age
- day-only and overnight admissions
- Service Related Group

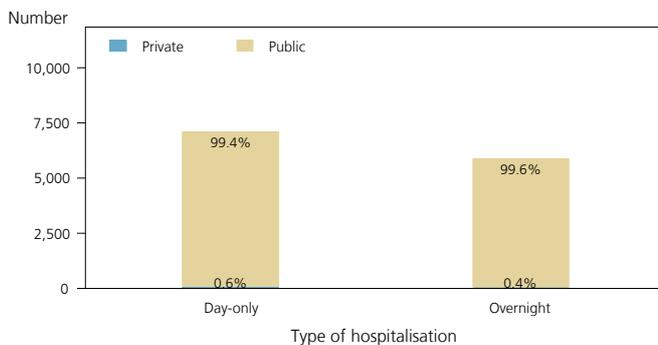

Hospitalisations that occurred in interstate private hospitals are not included in these statistics.

Far West LHD residents: hospitalisations in public and private hospitals by age, 2010-11

Notes: Includes hospitalisations that occurred in NSW public and private hospitals and interstate public hospitals. Service Related Group: SRG Version 4. The fall in reporting of endocrine diseases is related to changes in the coding standards for diabetes (see the Appendix).

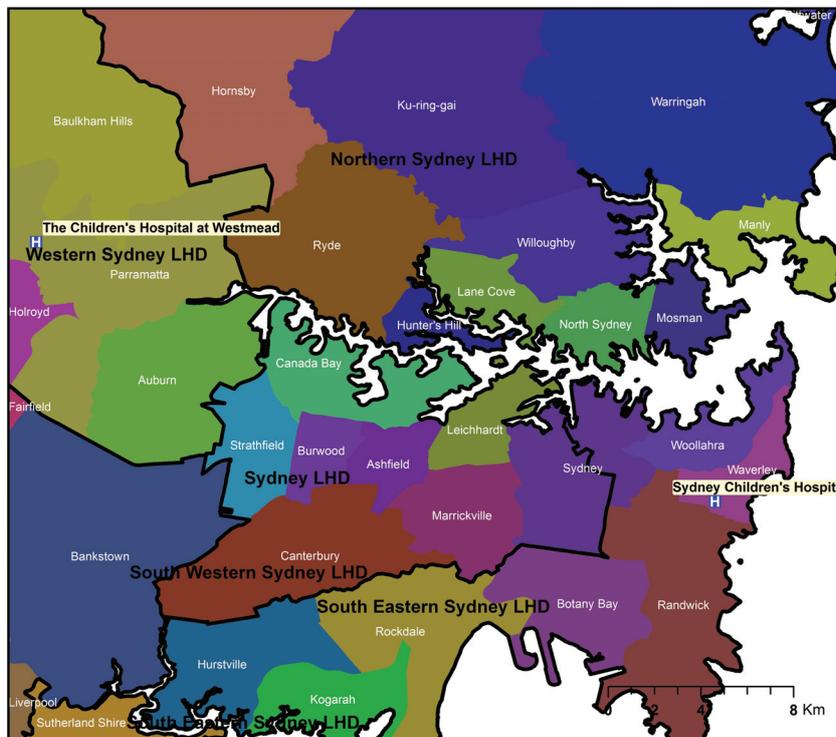

Sydney Children’s Hospitals Network

In the 2010-11 financial year, there were 47,021 hospitalisations in the Sydney Children’s Hospitals Network. Of these, 17,996 (38%) in Sydney Children’s Hospital (Peer Group A2) and 29,025 (62%) occurred in The Children’s Hospital at Westmead.

This chapter describes two sets of statistics:

- Overall hospital statistics. Section 18.1 describes combined statistics for the two children’s hospitals.
- Statistics for individual hospitals

Map of showing the Sydney Children’s Hospital and The Children’s Hospital at Westmead

Note: Local government area boundaries (2008) are shown within the LHD boundary.

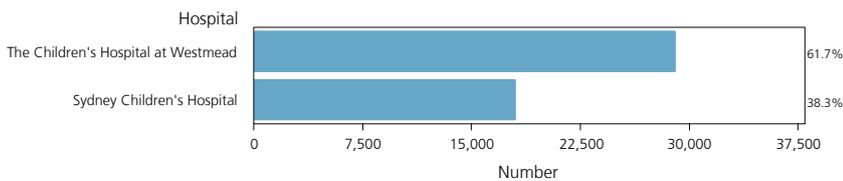

18.1 Hospitalisations: public acute hospitals

This section presents combined statistics for the two children’s hospitals.

Statistics reported in this section include hospitalisations by:

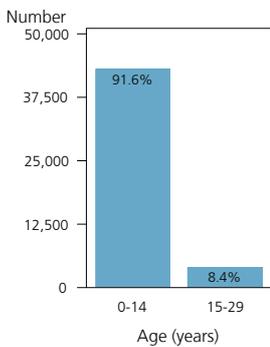

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Hospitalisations by hospital, Sydney Children’s Hospitals Network, 2010-11

St Vincent's Hospital Network

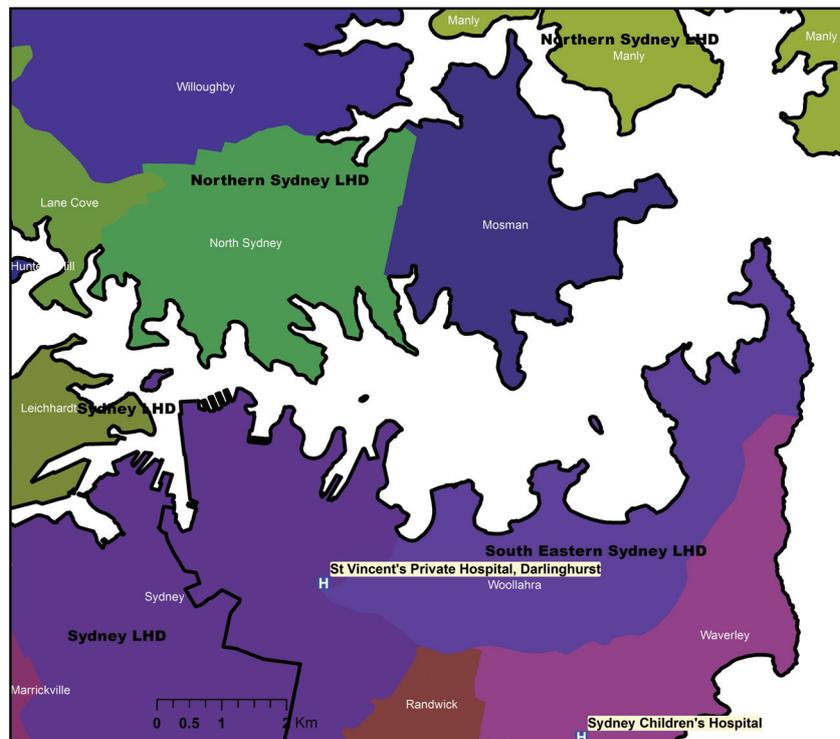

The St Vincent's Hospital Network operates across the public health services provided by three Sydney facilities operated by St Vincent's Health: these include St Vincent's Hospital and the Sacred Heart Hospice at Darlinghurst and St Joseph's Hospital at Auburn.

In the 2010-11 financial year, there were 40,576 hospitalisations in the St Vincent's Hospital Network. Of these, 38,493 (95%)

occurred in St Vincent's Hospital (Peer Group A1) and 2,083 (5%) occurred in the remaining two public hospitals.

Information on admitted patient services provided by St Vincent's Hospital is reported in this chapter. As St Vincent's Hospital provides services to a population broader than the hospital's local area, which is difficult to define geographically, population-based statistics are not reported here.

Map showing St Vincent's Hospital

Note: Local government area boundaries (2008) are shown within the LHD boundary.

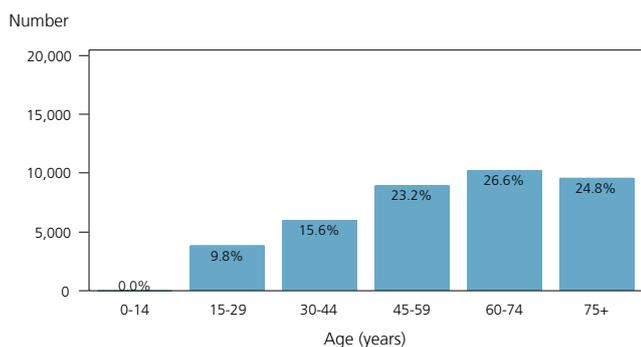

19.1 Hospitalisations: St Vincent's Hospital

This section presents combined statistics for hospitalisations at the St Vincent's Hospital (Peer Group A1).

Statistics reported in this section include hospitalisations by:

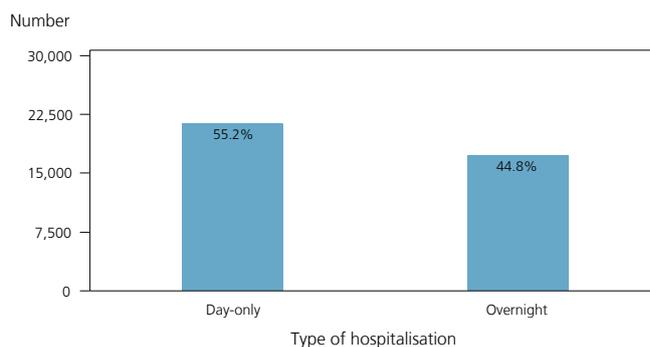

- hospital
- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Albury Base Hospital

While Albury/Wodonga Health Authority is not part of NSW Health, hospitalisations occurring in Albury Base Hospital are included in this report because it is geographically located in NSW and plays an important role in providing health services to the local NSW residents.

In the 2010-11 financial year, there were 12,395 hospitalisations in Albury Base Hospital (Peer Group B).

Map showing Albury Base Hospital

Note: Local government area boundaries (2008) are shown within the LHD boundary.

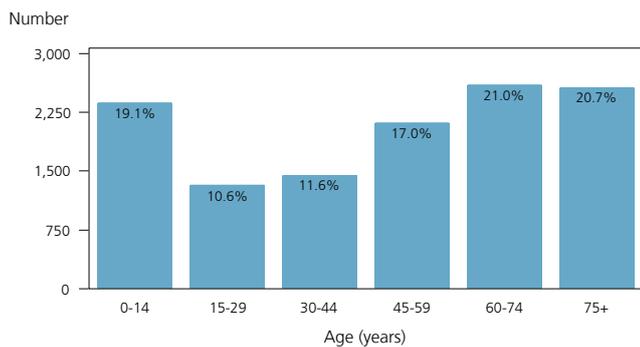

20.1 Hospitalisations: Albury Base Hospital

This section presents combined statistics for hospitalisations at the Albury Base Hospital (Peer Group B).

Statistics reported in this section include hospitalisations by:

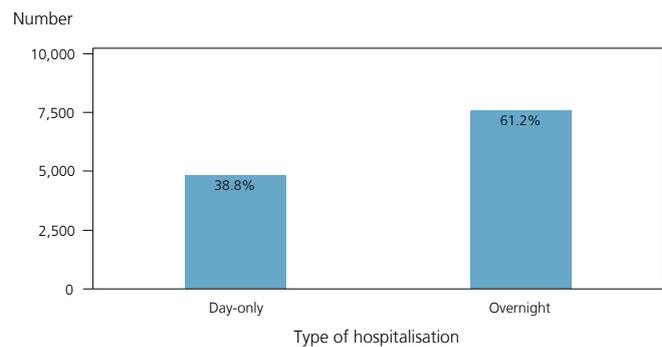

- age
- day-only and overnight admissions
- principal diagnosis
- selected high volume procedures
- Service Related Group
- selected health priority diseases and conditions

Notes: Total refers to sum of specific conditions listed. Priority diseases and conditions are selected by principal diagnosis. The fall in reporting of diabetes is related to changes in the coding standards for diabetes (see the Appendix).

Appendix: Methods

Data sources

NSW Admitted Patient Data Collection

The Admitted Patient Data Collection (APDC) is a census of all admitted patient services provided by NSW public hospitals, public psychiatric hospitals, public multi-purpose services, private hospitals, and private day procedures centres. It covers demographic and episode related data for every hospital separation in NSW. Separation can result from discharge, transfer, death, or change in care type. For public hospitals, the APDC enumerates episodes of care. An episode of care ends by either the patient ending a period of stay in hospital (i.e. by discharge, transfer or death) or by the patient undergoing a change in care type within the same period of stay in hospital. In contrast, private hospital data is based on period of stay. As both public and private hospital data are used in this report, the term 'hospitalisation' is used to refer to an episode of care in a public hospital and a period of stay in a private hospital.

All types of hospitalisations, including hospitalisations for patients who were admitted and discharged from emergency departments and patients who received Hospital in the Home care, are included in this report.

The APDC is managed by the Demand and Performance Evaluation Branch of the NSW Ministry of Health on a financial year basis. APDC data are updated frequently and collated in the Health Information Exchange (HIE). The version of the APDC used in this report was extracted from the HIE on 9 December 2011.

Information on persons hospitalised was obtained from linked APDC data. Linked APDC data were drawn from the Centre for Health Record Linkage (CHeReL) Master Linkage Key (CHeReL, 2012a). The CHeReL used the following information to link APDC records for the same person: full name, address, sex, date of birth, country of birth, hospital code, medical record number, dates of admission and discharge, hospital transferred to, hospital transferred from, and date of death (if the patient died in hospital). Linkage was carried out using probabilistic record linkage software

(Open Source ChoiceMaker Technology, 2012). Quality assurance procedures at the CHeReL ensure that there are no more than 5/1,000 missed links and no more than 5/1,000 false positive links in the CHeReL Master Linkage Key (CHeReL, 2012b). Linked APDC data up to 2009-10 were available at the time of production of this report.

Interstate admitted patient data

For analysis of hospitalisations among NSW and LHD residents, admitted patient data was included for public hospitals. However, hospitalisations that occurred in interstate private hospitals are not included in the analysis (see FLOWINFO).

FLOWINFO

FLOWINFO is an interactive PC-based admitted patient service planning tool. It incorporates APDC records for all public and private hospitals in NSW and records of NSW residents admitted to public hospitals in other states and territories. Data for interstate public hospitals are provided by each state/territory. At the time of preparation of this report, the most recent data received and verified by the NSW Ministry of Health were for the 2008-09 financial year and this has been carried forward for the 2009-10 and 2010-11 financial years. It is recognised that while this data will not be fully representative, omission would lead to considerable under-estimation of resident demand particularly in those areas of NSW which border another state or territory. Information in FLOWINFO is updated regularly. Data on Service Related Groups (SRG) was sourced from FLOWINFO Version 11.0 for this report.

Hospital Peer Groups

This report covers hospitalisations in public acute hospitals in Peer Group C2 District Group 2 and above and public psychiatric hospitals in Peer Group F1. Hospitals in these Peer Groups are listed in Table 1.

Table 1 Hospital and Peer Groups, NSW 2010-11

Principal diagnosis codes

This report provides information on principal diagnosis, representing the primary reason for hospitalisation. Diagnoses are coded using the International Classification of Diseases and Related Health Problems, Tenth Revision, Australian Modification (ICD-10-AM) (NCCH, 2008).

As reporting of additional diagnoses (co-morbidities) in admitted patient data is very sensitive to changes in coding standards and practices, additional diagnoses have not been included in this report. For the period 2006-07 to 2010-11, the principal diagnosis was coded in more than 95% of hospitalisation records for all NSW hospitals.

The recent fall in reporting of diabetes and endocrine conditions seen in NSW is related to changes in the Australian Coding Standards between the sixth and seventh editions of the ICD-10-AM. These changes affected the assignment and sequencing of the principal and additional diagnoses and the impact on reporting of diabetes is illustrated by the following example:

Patient admitted for treatment of diabetic ulcer of the lower extremity

From 1 July 2010 (ICD-10-AM, seventh edition), this scenario is coded as:

Principal diagnosis: L97 Ulcer of lower limb, not elsewhere classified

Additional diagnosis: E1-.69 Diabetes mellitus with other specified complication

From 1 July 2008 to 30 June 2010 (ICD-10-AM, sixth edition), this scenario is coded as:

Principal diagnosis: E1-.69 Diabetes mellitus with other specified complication

Additional diagnosis: L97 Ulcer of lower limb, not elsewhere classified

Diagnosis codes used in this report are shown in Table 2.

Table 2 Principal diagnosis codes

Diagnosis codes	ICD-10-AM code
Asthma	J45, J46
Blood and immune system diseases	D50-D89
Breast cancer	C50
Cardiovascular diseases	I00-I99
Chronic obstructive pulmonary disease	J41-J44
Colorectal cancer	C18-C21
Coronary heart disease	I20-I25
Diabetes: type 1	E10, O24.0
Diabetes: type 2	E11, O24.1
Dialysis	Z49
Digestive system diseases	K00-K93
Endocrine and metabolic diseases	E00-E89

Respiratory diseases	J00-J99, U04.9
Schizophrenia and related psychoses	F20-F29
Skin diseases	L00-L99
Stroke	I60-I69, G45, G46
Symptoms and abnormal findings	R00-R99

Procedure codes

Procedures were coded using the Australian Classifications of Health Intervention (ACHI) (NCCH, 2008). Procedure codes used in this report are shown in Table 3.

Table 3 Procedure codes

Procedure Indicators	ACHI Codes
Abdominal hysterectomy	35653-00, 35653-01, 35653-02, 35653-03, 35653-04
Appendectomy	30571-00, 30572-00
Arthroplasty of hip	49312-00, 49315-00, 49318-00, 49319-00
Arthroplasty of knee	49517-00, 49518-00, 49519-00, 49521-00, 49521-02, 49524-00, 49534-00, 49534-01
Arthroscopic meniscectomy of knee	49557-02, 49558-00, 49560-03, 49561-01, 49562-01
Caesarean section	16520-00, 16520-01, 16520-02, 16520-03
Cholecystectomy	30443-00, 30445-00, 30446-00, 30448-00, 30449-00, 30454-01
Colectomy	32000-00, 32000-01, 32003-00, 32003-01, 32004-00, 32004-01, 32005-00, 32005-01, 32006-00, 32006-01, 32009-00, 32012-00, 90328-01
Coronary artery bypass	38497-00, 38497-01, 38497-02, 38497-03, 38497-04, 38497-05, 38497-06, 38497-07, 38500-00, 38500-01, 38500-02, 38500-03, 38503-00, 38503-01, 38503-02, 38503-04
Curettage of uterus	35640-00, 35640-01, 35640-03, 35643-00, 35643-01
Destruction procedures on cervix	35539-02, 35608-00, 35608-01, 35646-00, 35647-00
Excision of lesion of breast	30347-00, 30348-00, 31500-00, 31515-00
Fracture of femur	47498-00, 47519-00
Major lens procedures	42698-02, 42702-04, 42702-05
Myringotomy	41626-00, 41626-01, 41632-00, 41632-01
Procedures for haemorrhoids	32132-00, 32135-00, 32135-01, 32138-00, 32138-01, 32138-02
Release of carpal tunnel	39331-00, 39331-01
Repair of inguinal hernia	30609-02, 30609-03, 30614-02, 30614-03
Tonsillectomy or adenoidectomy	41789-00, 41789-01, 41801-00
Transluminal coronary angioplasty	35304-00, 35305-00, 35305-01, 35310-00, 35310-01, 35310-02, 38300-00, 38303-00, 38306-00, 38306-01, 38306-02, 38303-01
Transurethral prostatectomy	37201-00, 37203-00, 37203-02
Vaginal hysterectomy	35657-00, 35673-00, 35673-01, 35750-00, 35753-00, 35753-01, 35756-00, 35756-01, 35756-02, 35673-02, 35753-02, 35756-03

Analysis

The analysis for the report covered all hospitalisations in NSW public and private hospitals and interstate public hospitals. For hospitalisations in NSW hospital, the analysis focused on hospitalisations in public acute hospitals in Peer Group C2 District Group 2 and psychiatric hospitals (Peer Group F1). For analysis of admitted patient services provided to NSW or LHD residents, hospitalisations that occurred in interstate public hospitals were included—hospitalisations in interstate private hospitals were not included in the statistics.

While Albury/Wodonga Health Authority is not part of NSW Health, hospitalisations occurring in Albury Base Hospital are included in this report because it is geographically located in NSW and plays an important role in providing health services to the local NSW residents.

Hawkesbury District Health Service is a private hospital which has a contract to provide public patient services. In 2010-11 more than two-thirds of hospitalisations (69.3%) were for public contracted patients. Hospitalisations for these public contracted patients are included in this report.

For principal diagnosis, information is presented in two ways:

1. ICD-10-AM chapter headings, with the following modifications:

- Chapter 2 Neoplasms is split into two groups, malignant neoplasms (cancer) and other neoplasms (carcinoma-in-situ and benign tumours), and are reported separately.
- Diseases of the nervous system (Chapter 6), Diseases of the eye and adnexa (Chapter 7) and Diseases of the ear and mastoid process (Chapter 8) are combined into one group.
- Diseases of the respiratory system (Chapter 8) and Codes for special purposes (Chapter 22, Severe Acute Respiratory Syndrome) are combined into one group.
- Certain conditions originating in the perinatal period (Chapter 16) and Congenital malformations, deformations and chromosomal abnormalities (Chapter 17) are combined into one group.
- Factors influencing health status and contact with health services (Chapter 21) is split into two groups with renal dialysis and other factors reported separately.

- Injury, poisoning and certain other consequences of external causes (Chapter 19) and External causes of morbidity and mortality (Chapter 20) are combined into one group

Principal diagnosis codes and groupings of codes used in this report are shown in Table 2.

As one person may have more than one hospitalisation during a financial year, particularly those with chronic conditions, information on principal diagnosis groups is presented for both the number of hospitalisations and persons hospitalised. Data on persons hospitalised up to 2009-10 were available at the time of production.

2. Selected priority diseases and conditions using principal diagnosis.

These are reported in a separate table where the disease or condition is a National Health Priority Area (AIHW, 2012) for which information is available on the APD and the information is not presented under an ICD-10-AM chapter heading.

For analysis of procedures, as one person may have more than one procedure during a hospital stay, all procedures are counted in this report. Procedure codes used in this report are shown in Table 3. The list of High Volume Surgical Procedures included in this report were initially chosen in 2010 by the then Department of Health to inform future public reporting; after consultation with stakeholders 26 High Volume Surgical Procedures were selected, being predominantly procedures with a high volume as well as some procedures with a moderate volume and high cost.

Service Related Groups (SRGs) are reported for both LHD hospitals and LHD populations. SRGs are assigned predominantly based on Australian Refined Diagnosis Related Group (AR-DRG) (DOHA, 2008) and are a useful way of classifying hospital episodes of care into groups representing clinical divisions of hospital activity. SRG version 4.0 has been used for this report. SRG data was sourced from FLOWINFO Version 11.0, which is administered by the Statewide and Rural Health Services and Capital Planning Branch of NSW Ministry of Health.

Glossary

Day-only hospitalisation

A person who is admitted to hospital and leaves on the same calendar day.

Episode of care

The period of admitted patient care between a formal or statistical admission and a formal or statistical separation, characterised by only one care type

Hospitalisation

An episode of care in a public hospital; a period of stay in a private hospital.

Hospital separation

The formal process whereby an inpatient completes an episode of care. For example, discharge to another type of care, discharge to home, discharge to another hospital or nursing home, or death.

Local Health Districts

Health administration structure applicable in NSW since January 2011.

Overnight hospitalisation

A person who is admitted to hospital and leaves on a different calendar day.

Peer Group

The peer group classification is intended to group hospitals into broadly similar groups in terms of their range of admitted patient activity and geographical location. Peer Groups used in this report are shown in Table 4.

Principal diagnosis

The first ICD-10-AM coding variable reported on the hospital separation form. It means the final diagnosis that best accounts for inpatient care.

Service related Group

Service Related Groups are assigned based on Australian Refined Diagnosis Related Group (AR-DRG) and are a useful way of classifying hospital episodes of care into groups representing the clinical divisions of hospital activity. SRG version 4 is reported in the NSW Admitted Patient Report 2012.

Surgical procedure

A clinical intervention that is surgical in nature, carries an anaesthetic risk, requires specialised training and/or requires special facilities or services available only in an acute care setting.
