

## Lumos Data Timings Explained

Version: September 2025

This document explains:

- Lumos 2025-26 timings
- Explanation of time lags and timeframes

# Who is this document for?

This document is intended for **GPs, Primary Health Networks (PHNs) and analysts**. It provides information on timings behind Lumos reporting and data availability.

Information for a general audience, including consumers, patients, general practitioners, PHNs, NSW Health and external analysts, on what Lumos is, what it contains, and privacy and security measures, can be found [here](#).

# 2025-26 Lumos key dates

Extraction date	General Practice Reports released	Reporting period	Data uploaded to SAPHE*
Oct 24 (01/10/24 - 15/10/24)	May 2025	Q4 2023-Q3 2024	May 2025
Apr 25 (01/04/25 - 15/04/25)	Oct 2025	Q2 2024-Q1 2025	Oct 2025
Oct 25 (01/10/25 - 15/10/25)	Apr 2026	Q4 2024-Q3 2025	Apr 2026
Apr 26 (01/04/26 - 15/04/26)	Oct 2026	Q2 2025-Q1 2026	Oct 2026
Oct 26 (01/10/26 - 15/10/26)	Apr 2027	Q4 2025-Q3 2026	Apr 2027

Dates are provisional only. Precise dates will be communicated with stakeholders closer to delivery.  
\*Date ranges for data coverage will vary by dataset. GP data span from extraction date back to 2010, where available.

# Lumos timelines

Lumos receives data from participating general practices and links it with data from Healthdirect and NSW Health.

The next few pages outline the timeline from first receipt of data from general practices, through to report delivery and availability of Lumos data by analysts\*.

\* Information on how to apply to use Lumos data, restrictions and conditions of use is available [here](#).

**Lumos**

## What's behind the Lumos timeline?

### Extraction

Patient data\* collected from participating general practices from 2010 (if available) up to date of extraction

Patient data sourced from NSW Health data available as of the date of the general practice data extraction

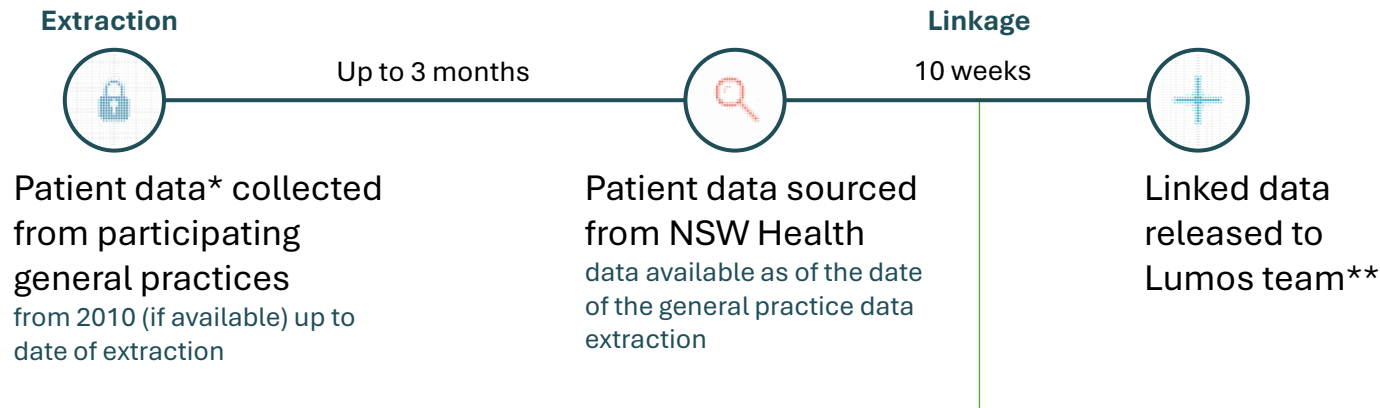

### Why the delay?

Data from general practices do not undergo quality control, other than any automated error prevention within local clinical information systems. Some tidying up of the data is applied by software used to send data to PHNs and Lumos (for example, standardising some diagnoses), but missed fields or mistakes recorded in error will not be corrected at a later date. What is recorded by practice staff during a clinical consultation is the final record.

By contrast to general practice data, data collected from public hospitals is subject to stringent quality control, with Local Health Districts (LHDs) employing teams of clinical coders that ensure final data comprehensively matches events that occurred. This takes time. As a result, hospital data become available approximately 3 months after general practice data are collected by Lumos.

\*Data are deidentified before leaving the general practice. Lumos operates under ethics approval with a waiver of individual consent. Patients are included when they have given their general practice permission for their health data to be used for secondary purposes, and their general practice has consented to participate. Patients who have not permitted secondary use of their data are excluded.

## What's behind the Lumos timeline?

### Why the delay?

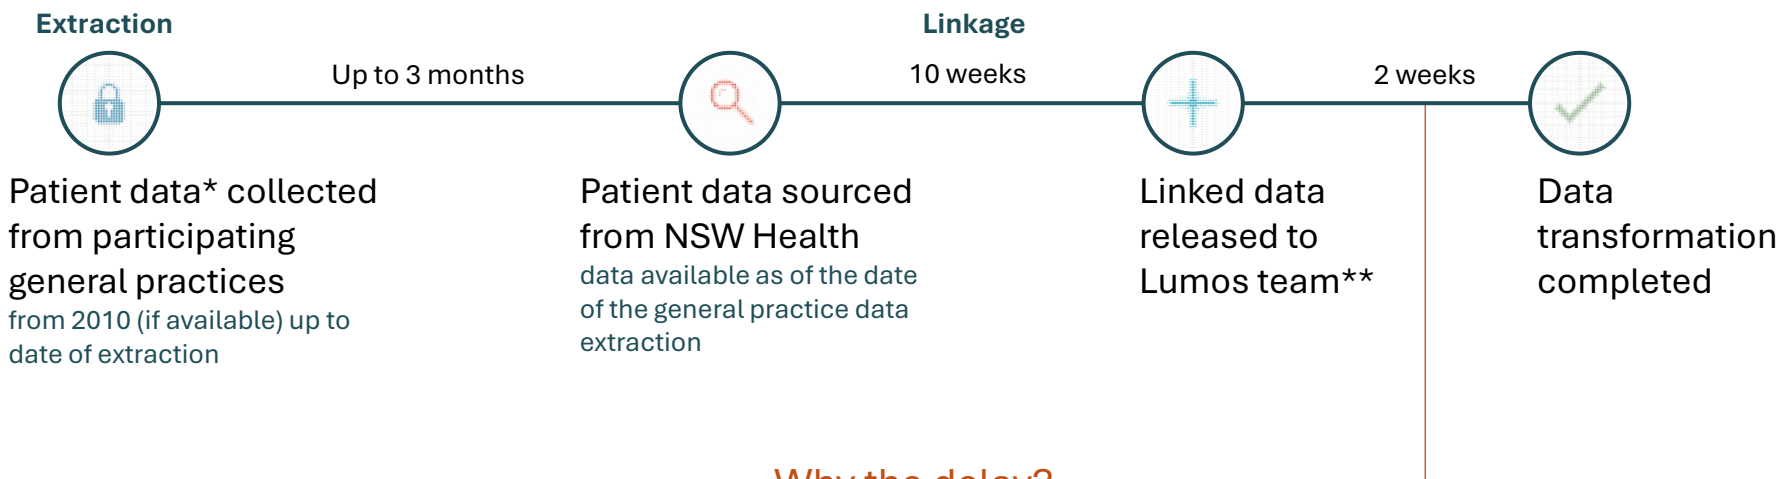

This timeframe reflects the huge, ever-growing volume of data to be linked into Lumos, and additional steps required to deploy Privacy Preserving Record Linkage (PPRL). PPRL is a technique that allows health data linkage without ever collecting patient names, addresses or other directly identifying information from general practices. General practice participation in Lumos is contingent on the application of PPRL.

In addition, before general practice data are added into Lumos, we first link other data sources. This linkage must undergo quality control measures. Often this involves verification through a manual process called clerical review. Up to 1% of all links may require this check. With over 7 million patients to be linked (and counting), this can be considerably time consuming...

\*See footnote on page 5.

\*\*Prior to this, all data are handled by the Centre for Health Record Linkage (CHeReL) in NSW Health, keeping encrypted identifiers and content data separate. These steps are to maintain patient privacy. As a result, steps on subsequent pages cannot occur at an earlier stage.

# What's behind the Lumos timeline?

## Why the delay?

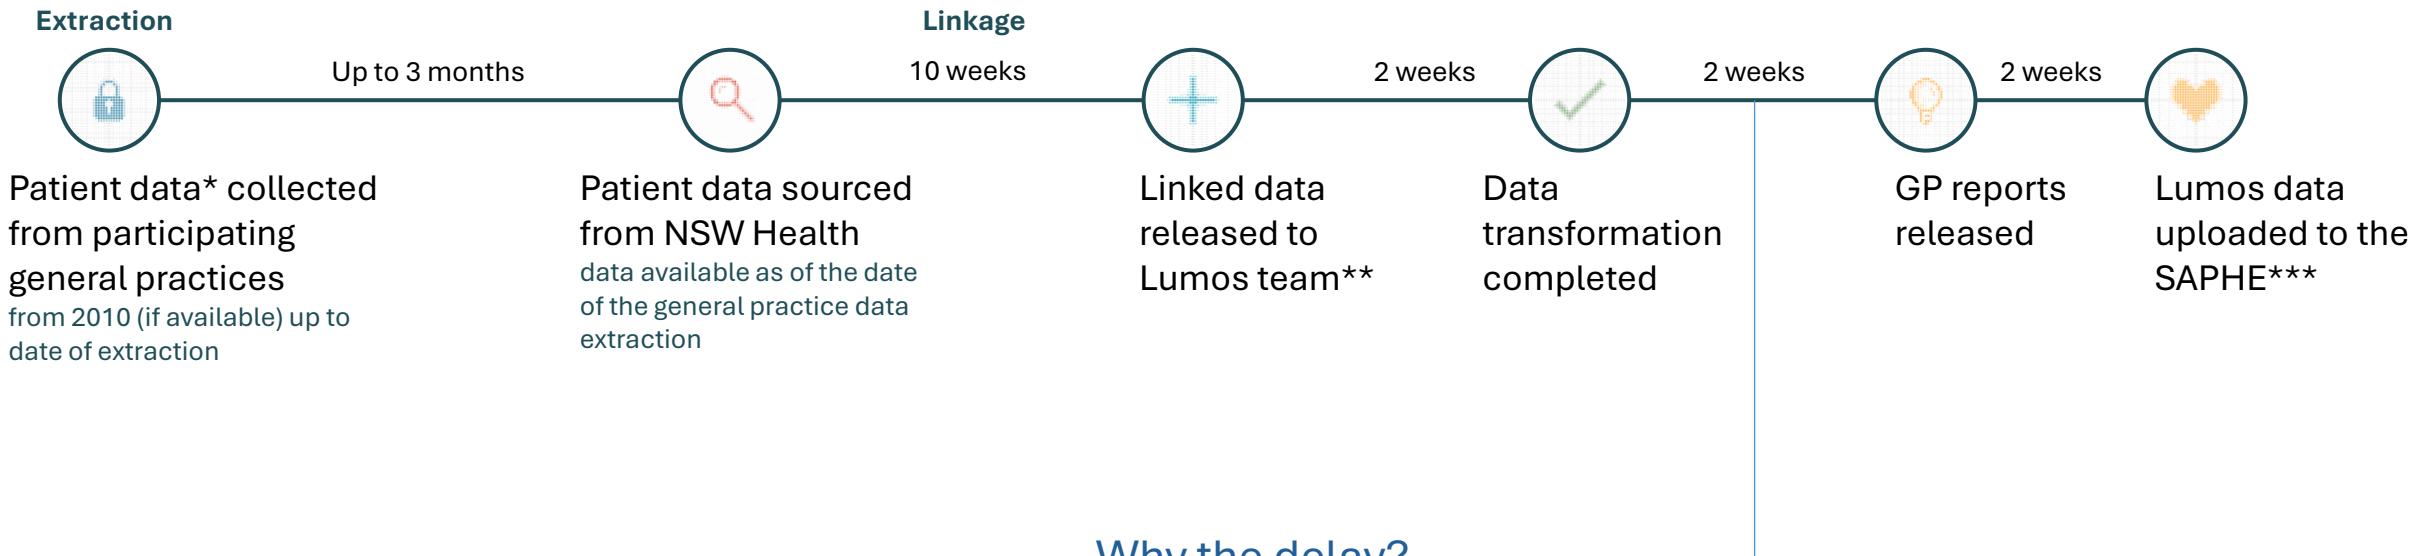

Because data from general practices do not undergo local quality control, and data received from different general practice software systems differ significantly<sup>α</sup>, Lumos runs an extensive, custom-built data cleaning program. This prepares the data for report generation and makes it usable for analysts.

\*See footnote on page 5.

\*\*See footnote on page 6.

<sup>α</sup>For example, see Agostino, J. et al. *Australian Journal of General Practice*, Vol. 53, No. 10, Oct 2024, 782-784

# What's behind the Lumos timeline?

## Why the delay?

GP reports are coded as much as possible in advance, including new conditions in focus with each edition, and feedback-derived improvements. This time period is required to ensure coding works with the new data (which can change between each tranche), for proofing and for troubleshooting.

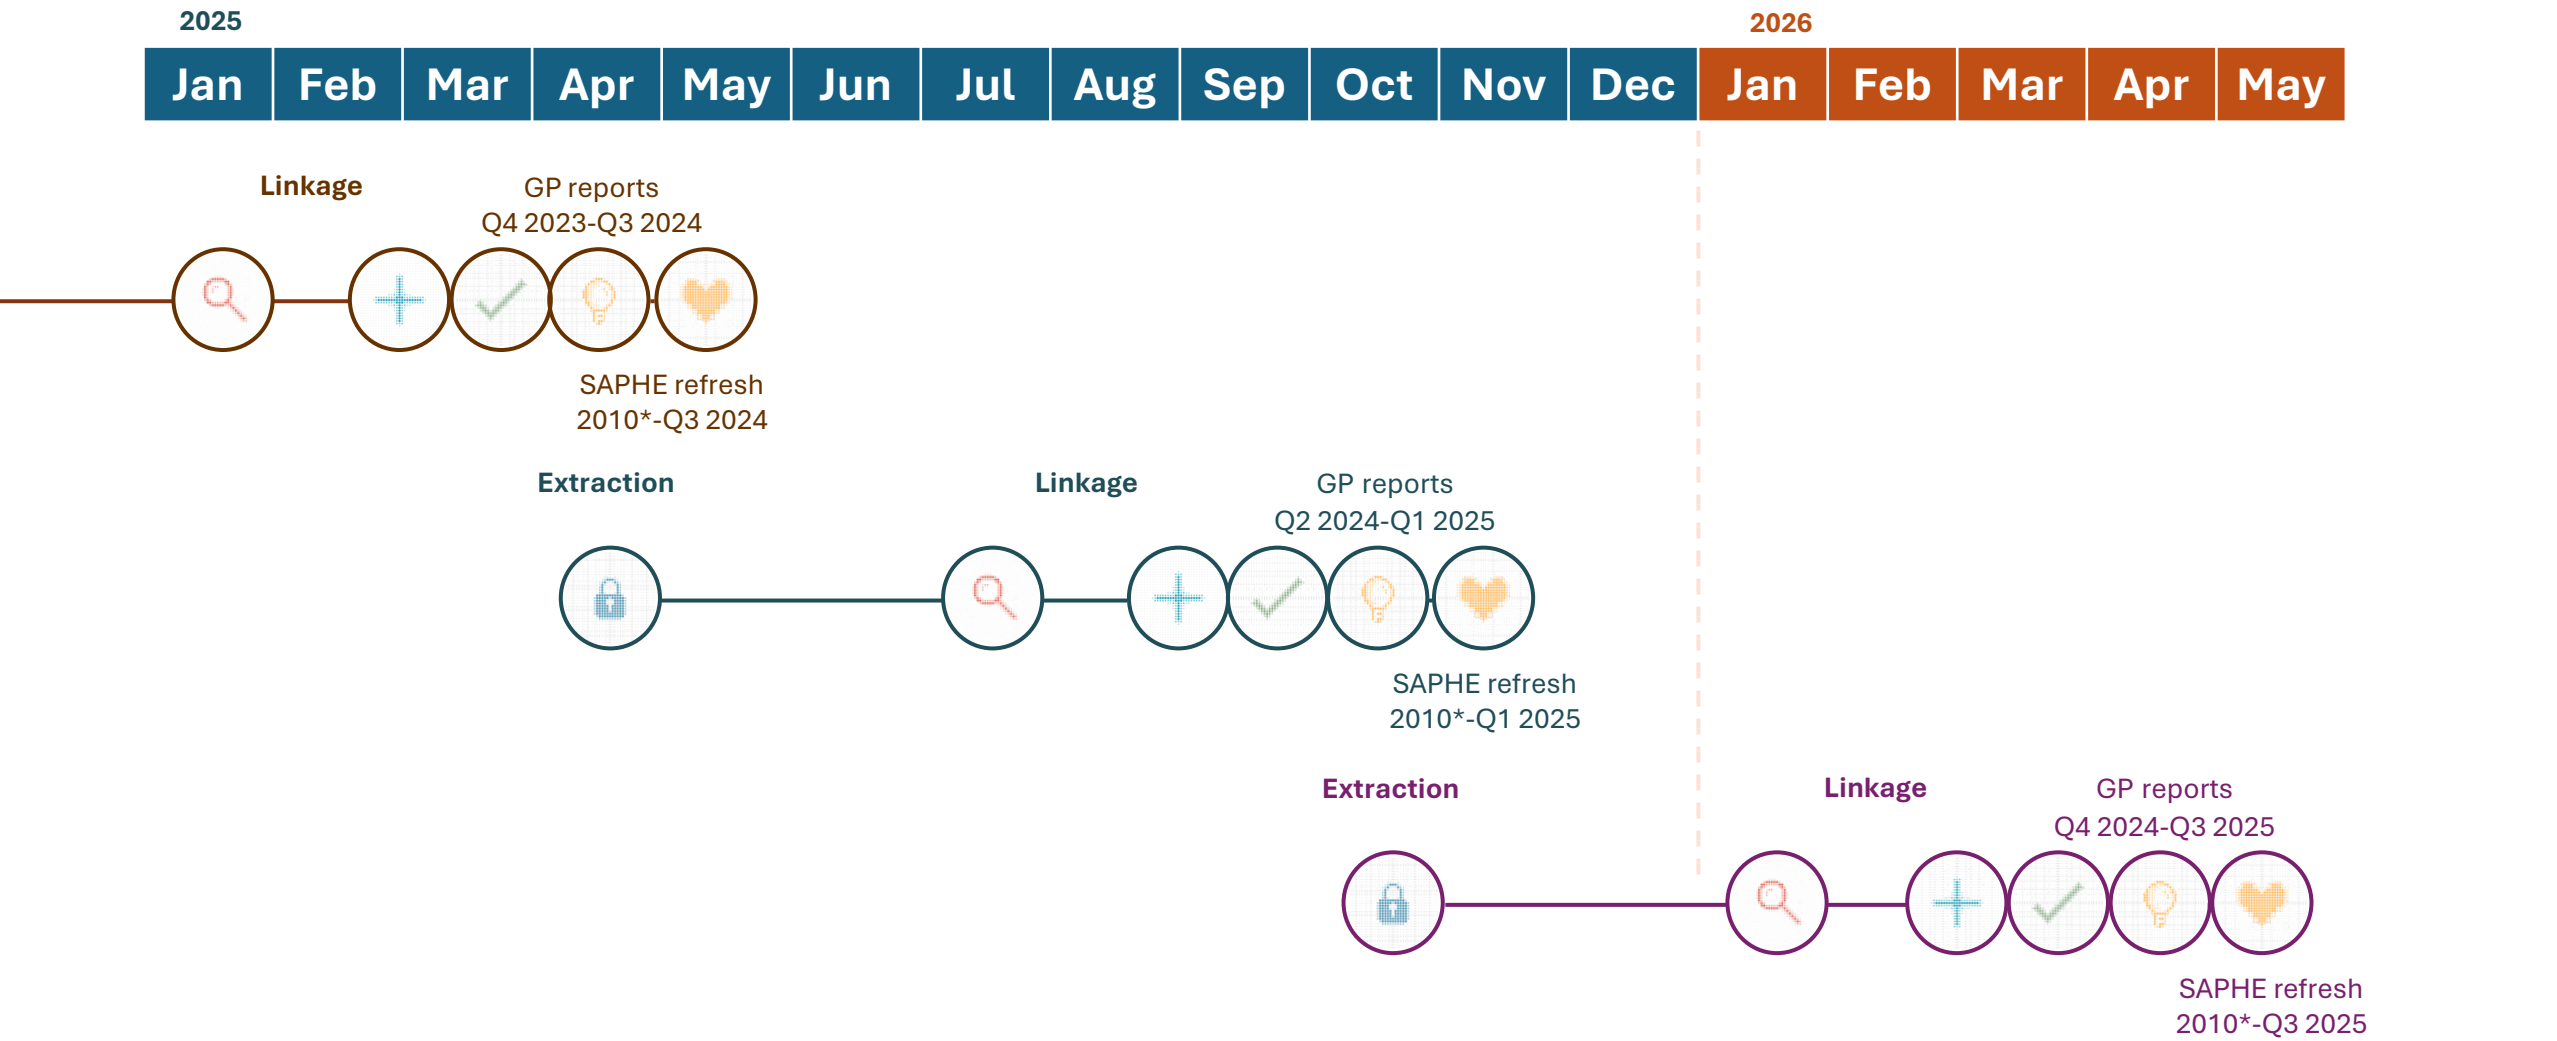

\*See footnote on page 5.

\*\*See footnote on page 6.

# Lumos 2025 timeline

	Secure extraction of patient data from GPs		Data linkage		GP reports released
	NSW Health patient data sourced		Data transformed		Lumos data added to SAPHE

Dates are provisional only. Precise dates will be communicated with stakeholders closer to milestones.  
\*Where available.

# Lumos 2026 timeline

	Secure extraction of patient data from GPs		Data linkage		GP reports released
	NSW Health patient data sourced		Data transformed		Lumos data added to SAPHE

Dates are provisional only. Precise dates will be communicated with stakeholders closer to milestones.  
\*Where available.
