Project goals	Key tasks	Output indicators (source of data)	Problem(s) being addressed	Relevant outcomes in the logic model	Expected outcomes	• Outcome indicators (Source of data)
Sharps management	Maintain community sharps bin network	• Number of bins provided in the City of Sydney (project records) • Proportion of waste in specified area (eg within 10m radius) in captured in sharps bin (project records) • Volume of waste in sharps bins and proportion of waste identified as needles (project records)	Needles are incorrectly disposed, and the presence of needles in public spaces has a negative impact on community perceptions and feelings of safety and present a health hazard.	Changes are made to the physical environment with the goal of improving safety Environmental conditions that impact on crime and safety are addressed The inappropriate use of public spaces targeted by the strategy declines	Increase in the availability of sharps bins to facilitate the appropriate disposal of needle waste Increase in community support for sharps bins Reduction in the incorrect disposal of needle waste People are more likely to feel safe in and make use of public space in which needles are correctly disposed	• Proportion of locations with identified need for sharps bin have bin installed (project records) • Number of requests for sharps bins to be installed in new locations, eg nightclubs (project records; formal or informal feedback) • Number of incidents of damage to bins (project records) • Extent to which community are supportive and engaged in management of sharps bin network (formal and informal feedback) • Number of complaints about incorrectly disposed needle waste (administrative data; needle health hotline) • Number of incorrectly disposed needles identified and reported by council staff (project records; administrative data) • Number of incorrectly disposed needles identified during needle count (observational data) • Safety 'scores' by community members in areas with and without sharps bins installed (Community audits) • Number of people (incl. families and children) who visit targeted locations at specified times (observational data)
	Community education	• Number and type of training packages disseminated (project records) • Feedback on the quality and usefulness of training packages and related materials (formal and informal feedback)				
	Manage sharps contract	• Number of bins provided in the City of Sydney (project records) • Time taken to dispose of waste and repair damaged bins (project records • Cost per bin managed by contractor (project records)
