

Frequently Asked Questions

What is the State-wide Referral Criteria?

State-wide Referral Criteria (SRC) is the clinical decision-support tool that communicates the minimum clinical criteria and referral information required for referrals issued to NSW public specialist outpatient services to enable safe, timely and effective triage. SRC is intended to support referring health professionals when issuing referrals as well as NSW public specialist outpatient services at the point of screening and triage.

What are the five criteria of State-wide Referral Criteria?

The five criteria of State-wide Referral Criteria include:

- Emergency Clinical presentations or 'red flags' where referring health professionals should consider redirecting the patient to an Emergency Department or urgent care service, or seeking medical advice (e.g. phone on-call medical practitioner). These criteria should not be used by referring health professionals to refer to NSW public specialist outpatient services.
- Out of scope (not routinely provided) Symptoms, conditions, and/or presentations that would not routinely be provided by NSW public specialist outpatient services (i.e. could be optimally and safely managed in primary care). These criteria acknowledge and permit exceptions, where clinically appropriate.
- Access and prioritisation Symptoms, conditions, and/or presentations that advise referring health professionals, clinicians, patients and carers suitability for management by NSW public specialist outpatient services. These criteria are classified by expected clinical urgency category and clinically recommended timeframes to be seen for a new outpatient appointment (i.e. Category 1: within 30 days, Category 2: within 90 days, Category 3: within 365 days). These criteria are only applicable where NSW public specialist outpatient services exist and manage the identified presenting condition.
- Required information Mandatory information that is to be supplied with referrals to NSW public specialist outpatient services for specific symptoms, conditions and/or presentations. These criteria support the determination of an appropriate clinical urgency categorisation.
- Additional information (if available) Optional information that can be supplied with referrals to NSW public specialist
 outpatient services for specific symptoms, conditions and/or presentations. These criteria support with the determination
 of an appropriate clinical urgency categorisation, however, are not required to continue referral processing.

How are State-wide Referral Criteria developed?

The development of State-wide Referral Criteria (SRC) is led through a specialty- and patient cohort-specific Clinical Advisory Group. Each Clinical Advisory Group comprises of NSW Health doctors, allied health professionals, nurses and/or midwives as well as referring health professionals who are appointed to provide clinical advice and expert opinion based on scientific evidence and clinical best practice guidelines. Once the Clinical Advisory Group reaches a consensus in defining the SRC for identified presenting conditions, the SRC is circulated to a range of stakeholders for consultation.

All feedback received from the consultation is considered and, where appropriate, amendments are made to the SRC. The proposed SRC then undergoes an independent, clinical review in preparation for final endorsement from relevant professional groups.

Why are State-wide Referral Criteria important?

The availability of State-wide Referral Criteria (SRC) provides referring health professionals with clearer expectations of clinical and referral requirements when determining whether to issue a referral to NSW public specialist outpatient services.

The application of SRC improves the quality and appropriateness of referrals to NSW public specialist outpatient services, minimise clinical variation with referral acceptance and triaging practices, and reduce the number of patients who wait unnecessarily on NSW public specialist outpatient waitlists.

What is the scope of State-wide Referral Criteria?

State-wide Referral Criteria (SRC), where available, is in-scope for NSW Local Health Districts and Specialty Health Networks with existing NSW public specialist outpatient services where new referrals (external and/or internal to NSW Health) are accepted, and presenting conditions with associated SRC are managed. For example, if Service A is available in NSW Local Health District A, new referrals from General Practitioners are accepted, and Service A manages Condition A, SRC is to be applied.

Are referring health professionals expected to reference the State-wide Referral Criteria upon availability?

Yes. Referring health professionals are expected to reference State-wide Referral Criteria (SRC), where available, when determining to issue referrals to NSW public specialist outpatient services.

By referencing the SRC, referring health professionals will be made aware of thresholds for referral to NSW public specialist outpatient services and the expected clinical urgency category based on clinical need.

What are the implications for referring health professionals who do not reference the State-wide Referral Criteria?

Referring health professionals who do not reference State-wide Referral Criteria, where available, will be unaware of the expectations of clinical and referral requirements when determining to issue referrals to NSW public specialist outpatient services.

As a result, patients may be delayed access to care due to NSW public specialist outpatient services seeking additional clinical and/or referral information from referring health professionals to support with referral screening and triage and/or returning the referral to referring health professionals with advice of alternative care options.

What are the key changes for referring health professionals with the availability of State-wide Referral Criteria?

Present state	Desired state	Key changes
• Issue referrals to NSW public specialist outpatient services based on local referral criteria	• Issue referrals to NSW public specialist outpatient services based on State-wide Referral Criteria (SRC)	 Refer to SRC (where available) when determining to issue referrals to NSW public specialist outpatient services
		Supply clinical and referral information in line with SRC to NSW public specialist outpatient services

Are NSW Local Health Districts and Specialty Health Networks expected to apply the State-wide Referral Criteria upon availability?

Yes. In line with the NSW Health Management of Outpatient (Non-Admitted) Services Guideline, NSW Local Health Districts and Specialty Health Networks are expected to apply State-wide Referral Criteria upon availability.

What are the implications for NSW Local Health Districts and Specialty Health Networks that do not reference the State-wide Referral Criteria, where available?

NSW Local Health Districts and Specialty Health Networks that do not reference State-wide Referral Criteria, where available, may experience inconsistencies in referral acceptance and triage practices.

As a result, patients may be delayed access to care due to clinical variation in referral acceptance and triage practices and/or waiting on outpatient waitlists unnecessarily.

What are the key changes for NSW Local Health Districts and Specialty Health Networks with the availability of State-wide Referral Criteria?

Present state	Desired state	Key changes
 Screen referrals based on local referral criteria Determine triage outcome and clinical urgency category with reference to local referral criteria Referral screening and triage workflows accommodate local referral criteria 	 Screen referrals based on Statewide Referral Criteria (SRC) Determine triage outcome and clinical urgency category with reference to State-wide Referral Criteria (SRC) Referral screening and triage workflows accommodate State-wide Referral Criteria (SRC) 	 Refer to SRC, where available, when screening referrals to identify missing information Request referring health professionals to supply missing information in line with SRC Refer to SRC, where available, when triaging and clinically prioritising referrals Redesign referral screening and triage workflows to accommodate
		SRC

When will the State-wide Referral Criteria be made available to referring health professionals, NSW Local Health Districts and Specialty Health Networks?

Priority for the development and implementation of State-wide Referral Criteria (SRC) has been given to specialties with a high volume of activity across NSW public specialist outpatient services. Specialties selected for SRC development in Phase 1 include Ophthalmology, Gastroenterology, Ear, Nose & Throat (ENT), and Orthopaedics.

SRC for identified presenting conditions within the specialties of Ophthalmology and Gastroenterology were made available in July 2023. SRC for additional presenting conditions within the specialties of Ophthalmology and Gastroenterology will be made available in May 2024. SRC for identified presenting conditions within the specialties of ENT and Orthopaedics will be made available in June 2024.

Does the State-wide Referral Criteria define presenting conditions to be managed by all NSW Local Health Districts and Specialty Health Networks?

No. The State-wide Referral Criteria (SRC) does not define presenting conditions to be managed by all NSW Local Health Districts and Specialty Health Networks. Rather, the SRC defines the criteria to be applied by existing NSW public specialist outpatient services where new referrals (external and/or internal to NSW Health) are accepted, and presenting conditions with associated SRC are managed.

As a referring health professional, how can I access the State-wide Referral Criteria?

Referring health professionals can access the State-wide Referral Criteria (SRC) on the <u>NSW Health SRC webpage</u>. The SRC will also be progressively accessible on NSW HealthPathways pages and NSW Health electronic referral (e-Referral) forms.

As a clinician working in an NSW public specialist outpatient service, how can I access the State-wide Referral Criteria?

Clinicians working in NSW public specialist outpatient services can access the State-wide Referral Criteria (SRC) on the NSW Health SRC webpage. Each NSW Local Health District and Specialty Health Network will also have local processes and systems in place to support the application of SRC.

As a referring health professional or clinician working in an NSW public specialist outpatient service, what do I do if the State-wide Referral Criteria is not available for a given specialty or condition?

Where there is no State-wide Referral Criteria available for a given specialty or condition, referring health professionals and clinicians working in NSW public specialist outpatient services are to follow local referral criteria determined by NSW Local Health Districts or Specialty Health Networks and/or visit HealthPathways for more information.

As a referring health professional or clinician working in an NSW public specialist outpatient service, can I override the State-wide Referral Criteria?

Yes, where appropriate. The State-wide Referral Criteria (SRC) is intended to be used by referring health professionals and clinicians working in NSW public specialist outpatient services as a clinical decision-support tool. As such, referring health professionals and clinicians working in NSW public specialist outpatient services may override the SRC should it be deemed necessary. Issuing and/or accepting referrals that vary from the SRC are to be documented with clinical reasoning.

As a patient or carer, how can I access the State-wide Referral Criteria?

Patients and carers can access the State-wide Referral Criteria (SRC) on the NSW Health SRC webpage.

Will all referrals made to an NSW public specialist outpatient service in accordance with the State-wide Referral Criteria result in patients being seen by a doctor?

No. The State-wide Referral Criteria (SRC) supports patients to be managed by the most appropriate member(s) of the multidisciplinary care team, involving doctors, nurses, midwives and/or allied health professionals, in the most appropriate setting based on their presenting condition. This may result in patients being seen by a doctor, nurse, midwife and/or allied health professional, or nurse, midwife and/or allied health professional only.

Does the State-wide Referral Criteria apply to referrals where patients are being referred for multiple reasons to a given NSW public specialist outpatient service and there is not a primary condition for the referral?

State-wide Referral Criteria (SRC) may not be applicable to referrals where a patient is being referred for multiple reasons to a given NSW public specialist outpatient service and there is not a primary condition for referral (e.g. complex or rare disease). The decision to apply SRC under these circumstances is to be assessed on a case-by-case basis.

Are there processes in place to regularly review the State-wide Referral Criteria?

Yes. The relevant Clinical Advisory Group will review the State-wide Referral Criteria (SRC) on a biennial basis, at a minimum, to ensure alignment with contemporary evidence and clinical best practice guidelines. Where urgent changes are required to the SRC, a representative of the SRC project team will convene the relevant Clinical Advisory Group to determine the changes to be made.

What is the process to request a change to the State-wide Referral Criteria?

Interested stakeholders can issue State-wide Referral Criteria (SRC) change requests via the NSW Health SRC
